Roberto Nicalia

CEO/President, Nicolock Paving Stones

WELCOME

TO NICOLOCK PAVING STONES

If you're like me, you turn to your family and closest friends when times are tough--and they've sure been tough for a while now. Constantly changing directives still impact the way people gather in public. But in our homes, it's our rules.

So, whether you're more comfortable working remotely and hanging at home with your immediate family or you're ready to invite the whole crew over for some long overdue celebrating, you can expand your outdoor living space with a custom backyard by Nicolock.

For over 60 years, three generations of my family have been bringing people's backyard dreams to life. Now, it's your turn.

WHY HOMEOWNERS CHOOSE NICOLOCK

Color. For many homeowners, it's ALL about the color! And no one offers a larger selection of stunning color palettes than Nicolock. Match your hardscape to your siding or shutters, go with natural earthy tones, or maybe add a pop of color as an accent--your project's color options are limitless.

Plus, only Nicolock offers paver-**shield**[™]. This technology floods each durable stone with rich, vibrant color throughout the entire paver--ensuring color, beauty, and strength that will last for generations.

Supportive Sales Team. No one likes a pushy salesperson--or one who doesn't have the answers you need. Many of our Territory Managers are former contractors so they're very knowledgeable and speak from experience when answering your questions. And the quality, color, and photos of past

Nicolock projects are so stunning, there's no need for a hard-sell approach. Our sales consultants will even come to your home with up to three (3) free sample pavers for you so you can see them in your own backyard.

Easy Shopping Experience. If you want to wander around a cavernous showroom to see samples of inspiring outdoor living layouts, our 10,000 square foot design center on Long Island is open 24/7!

Or if you prefer a more private and pampered shopping experience, we will literally bring our showroom to you. Relax and plan out your project in our spacious, well-lit, 10' x 20' Mobile Design Center that pulls right up to your front door! You'll get to see the colors and sizes and feel the textures of the most popular outdoor living elements--including pavers, walls, fire features, grills, and more. Book your personal Mobile Design Center event today.

Lifetime Transferable Warranty. A true test of a company's integrity is if it's there for you after the job is complete. Our reputation means everything to us and it has for over six decades. We are so confident in the quality of our product that we back it with a lifetime transferable warranty. So not only can generations of your family make special memories in the space we build for you, but the warranty transfers with the sale of the home.

Affordability and Financing. No matter what your budget is, your Nicolock project will be stunning. We offer several flexible financing plans to make your outdoor living dream a reality. Whether the project is done all at once, or in stages over time, there are multiple financing options available to help you maximize the scope of your outdoor dream space--so that special feature you thought was out of reach might be affordable after all.

You may have financed your home purchase or some interior home improvements. So why not consider financing your outdoor living space vision, too?

No Supply Chain Worries. The only thing harder than choosing your color and design is then having to wait a long time to build it because the manufacturer is out of product. Many homeowners are expanding their outdoor living spaces now, so choosing a manufacturer that can actually deliver the goods is crucial.

Not only did Nicolock ramp up production in our existing plants 24/7 to meet the anticipated increased demand for hardscape materials, but we have three brand new manufacturing plants under construction, two of which are nearing completion this year. When you choose Nicolock, we're ready to roll when you are.

So, are you ready?

Let's get started.

COME HOME TO NICOLOCK!

Nicolock pavers have a full, structural lifetime warranty* and are transferable to the next owner should you sell. Register your products at [NICOLOCK.COM](https://www.nicolock.com) and follow the 3 easy steps below.

1

Click the **WARRANTY** link at the bottom of our homepage.

LIFETIME WARRANTY*

Nicolock provides a limited lifetime warranty on the structural integrity of its manufactured product used in residential applications. Nicolock pavers are warranted for as long as you own your home and are transferable to the next owner should you sell. Nicolock products installed in accordance with our guidelines and industry standards that are deemed to be structurally defective will be replaced with products of equal value. Removal and replacement labor cost is not the responsibility of Nicolock. Regarding de-icing products, Nicolock recommends sand for slip resistance as it is the most environmentally friendly option for use on concrete products. If a de-icing product is used, Nicolock recommends using only NaCl (rock salt) which should be used sparingly, following the manufacturer's instructions. Once ice is loosened, remove immediately to avoid buildup of the de-icing agent. **NOTE:** De-icing agents of any kind are not recommended for our Nicostone line.

Color matching and product availability are not guaranteed. Proof of purchase and/or installation contract must be made available prior to or at the time of inspection by an authorized Nicolock representative. Other exclusions apply.

Nicolock / Nicolica Concrete Products is the owner or authorized user of all patents and trademarks for products and designs illustrated herein. Firma®, Checker Block®, Sante-Euro® & paver-shield® are examples of registered trademarks of Nicolica Concrete Products. SF-Rima® is a trademark of SF Concrete Technology, Inc. Trinity® is a trademark of Earth Reinforcement Technologies. • US Patent # : Firma® 6,082,933.

DEFER PAYMENT, NOT YOUR DREAMS!

Introducing **Nicolock Financing** powered by Service Finance, a nationwide consumer finance program. Our exclusive financing plans make it possible for homeowners to complete their dream outdoor living spaces now with the help of multiple financing options, including true no interest payment (SAC), low monthly payments, or a combination of both plans.

Increase your homes value with the peace of mind of **Nicolock Financing**. Ask your Territory Manager for more information.

LOW MONTHLY PAYMENTS

Avoid high credit card interest rates. Choose the best payment option for you.

UNSECURED FINANCING

100% unsecured financing up to **\$100,000** on approved credit.

FAST, EASY AND SAFE

Easy application for near-instant approvals via phone, online or mobile app, 24/7

PEACE OF MIND

The application is free, there are no closing costs and no prepayment penalties

THE
PAVER-SHIELD[™]
 DIFFERENCE

Our patented process is not a sealant and features a smooth, ultra dense surface and rich vibrant color guaranteed not to fade!

1

Nicolock sources the highest class raw materials in the industry for the highest quality pavers

2

Our state-of-the-art manufacturing process creates a durable base mix

3

Iron oxide bonds with cement molecules resulting in the most vibrant color seen throughout each paver

4

Other quality materials are added to create our **PAVER-SHIELD**[™] **TECHNOLOGY!**

7

PAVER-SHIELD[™] is not a sealer, it's built into the manufacturing process for optimal durability

6

The final result is the very best in color, strength, and beauty that will last for generations!

5

PAVER-SHIELD[™] gives pavers a tight, smooth surface texture that will not expose heavy aggregate

PAVER-SHIELD[™] TECHNOLOGY
 Tight, smooth surface texture that is built into the paver, not a sealer like other manufacturers

Ultra dense base mix featuring color throughout the paver ensuring a lifetime of beauty

Things to consider...

A key aspect to consider when choosing your product is your landscaping. Keep in mind the change of seasons and the way the colors around your home project will change. Different times of day may cast shadows in different areas of your pavers. It's important to plan how the environment affects your aesthetic. The color illustrations in this catalog are as accurate as photography and printing processes allow. **Final selection of colors should be made from several physical samples.**

Images below were photographed minutes apart in the same location. Image on the left is in full sun, image on the right is with cloud cover.

Shade variations are inherent in colored concrete products using natural materials. Delivered product can vary slightly from physical samples.

Using advanced design fundamentals to

CREATE A STRIKING VISUAL OUTDOOR SPACE

Nicolock has everything you need to create the “**WOW**” factor when you’re designing your outdoor space. Whether it’s a new patio, poolscape, driveway, or any other outdoor project, our design fundamentals make it easy to create a customized look that complements your particular style and taste. It all begins with color. Choose from our vast collection of rich, artisan colors. Then, get creative with our different-shaped paving stones and paver laying pattern options. Check out a few examples of popular laying patterns on the next few pages-- or mix and match to create your own unique design.

90° traditional

PAVER DIRECTION

Go from a traditional installation to an exceptional look by laying pavers at a 45 degree angle to create the illusion of space.

45° with border

BORDERS

Borders define edges and softly combine large areas that would otherwise be toneless. Monochromatic or contrasting colors help define your style.

45° with inlay

INLAYS

Inlays allow you to define an area within your outdoor space. Often created with contrasting colors and textures, inlays add visual interest to make your space pop.

start with **COLOR**

Nicolock's Top-Selling colors bring in a variety of cool and warm neutral tones. Blends of grays, tans, blues and browns help you bring your outdoor living dreams to life.

Use your future hardscape to complement colors in your home. Use your siding, shutters, fence and roof as guides to help you choose what best works for you.

ENVIRONMENTAL *options*

Granite City Blend

Going green was never so easy or cost efficient. Nicolock's environmental pavers work with nature to provide visually appealing pavement options, plus the bonus of storm water management.

Available in a range of attractive colors, textures and styles, our environmental paver collection comes with ADA-compliant joint openings and is designed to filter rainwater safely back into the ground.

Eco-Ridge 80MM

Granite City Blend

An oversized brick shape with a slightly textured riven surface. Slightly chamfered edges with a 13% open surface area. Joint opening is compliant with the Americans with Disabilities Act. (ADA)

*Wall heights shown are intended as a guide and not for construction purposes. **Note:** Gravity walls rely on unit weight and unit set-back to retain soils. Reinforced walls rely on unit weight, unit set-back and geogrid to retain and stabilize soils.

The symbol signifies that this product is suitable for building elevated wall heights using geogrid reinforcement or other design methods. Consult a licensed engineer for design assistance.

Keystone® Compac III Straight Split

The Compac III's shape allows for tight radius curves and vertical core alignments. This wall can do it all with vertical or battered setback construction options. With triangular-shaped receiving holes, construction adjustments are simplified. Natural stone appearance and rich colors complement any setting.

RUSTIC BROWN

Bring the heat with **FIRE PITS & FIREPLACES**

Granite City Blend

WOOD

The Standard Wood option is for fire lovers who appreciate the full aesthetics of burning wood. Choose your coping option for added height.

SMOKE-LESS WOOD

A unique double-wall design results in smoke reduction. When a fire is burning, the walls heat up, hot air rises and exits the wall cavity through the line of holes around the rim. This pressurized, heated oxygen mixes with the smoke and causes it to reburn, reducing smoke.

GAS

Whether you prefer propane or natural gas, each ignition type includes everything you need to experience season-round enjoyment day or night. Packages include the vent kit for all ignition systems and control panels for MT and TMSI options.

Serafina Fire Pit

Granite City Blend

There is something magical about sitting around the fire pit. The Serafina Fire Pit provides a charming focal point for entertaining with family and friends.

VERTICAL PANEL TECHNOLOGY

Vertical Panel Technology is the smart alternative to block and stone masonry. Reinforced concrete panels and an easy installation process makes constructing outdoor living spaces quick and affordable. This technology enables you to choose the texture, profile and color palette to fit the natural landscape of any backyard or outdoor setting. Reduce material waste and environmental impact, while delivering the highest quality vertical masonry structures.

CUSTOMIZE YOUR FIRE PIT

SMOKE-LESS

Smoke-Less Fire Systems work through a double-wall, secondary combustion design. When the fire is burning, the walls heat up and the hot air rises through the gap between the two walls. The air then exits the wall cavity through the line of holes around the rim. Pressurized, heated oxygen mixes with the smoke and causes it to reburn.

PAVER INSTALLATION

MATERIALS NEEDED

- Gloves
- Tape Measure
- Stakes
- Shovel
- 3 lb. Hammer
- Levels
- Line Level
- Carpenters Square
- String Line
- Broom
- Wheelbarrow
- Pry Bar
- Wire Cutters
- Mason's Chisel
- Markers
- Screed Board
- Two 1" o.d. Screed Pipes
- Plate Compactor
- Paver Cutter
- Diamond Blade Table Saw

- A. Compacted Sub-Base
- B. 4" - 6" Compacted Aggregate (for Pedestrian Traffic)
- C. 8" - 12" Compacted Aggregate (for Vehicular Traffic)
- D. Edge Restraints
- E. 1" Bedding Sand
- F. Pavers

BEFORE YOU BEGIN

Your dealer can assist you in obtaining the necessary materials and equipment needed to complete your paving stone installation.

*Three color blends are not recommended for projects less than 500 sq.ft

Lay out your entire paver pattern prior to cutting any stones.

Find an area away from your installation to cut pavers. Concrete dust created by saw cutting pavers can stain the surface.

The use of an approved safety mask is recommended when cutting any concrete products.

1. PLAN

Determine the area to be paved. Measure for square footage and sketch a diagram of the shape & pattern of paving stone desired.

2. PREPARE / EXCAVATE

Before beginning excavation, make sure there are no utility lines within the area to be paved. Excavate area to the proper depth depending on the type of traffic.

3. GRADE

Establish the finish grade and slope or pitch of pavement to allow for drainage. Lay out the lines and corners with string line and stakes. Compact sub-base.

4. PREPARE / EXCAVATE

Spread aggregate base uniformly throughout the entire excavated area and 8 in. beyond perimeter lines. Base aggregate material should be processed 3/4" minus gravel or crushed concrete blend.

5 BASE COMPACTION

Compact the base aggregate evenly throughout the area with a mechanical plate compactor. Do not compact the base aggregate in more than 4" layers. The compacted base should conform to the contour of the finished paved area. The grade of the base aggregate should be 3" to 4" below the finished paving stone surface depending on the thickness of the paver.

6. EDGE RESTRAINTS

Install edge restraints as required. Pavers butting against curbs or

foundations will not need an edge restraint. Various types of edging materials can be used. Nicolock recommends a Snap Edge edge restraint system since it is easy to install and will not rot or decay.

7. BEDDING

Spread 1" of concrete sand evenly over the compacted base. Screed the bedding sand to a level, smooth surface using a screed board. For areas wider than the width of the screed board, use 1" conduit pipe as screed guides 4' apart. Screed sand, remove screed rails & fill in depressions with fresh sand. You should end up with a complete layer of smooth sand. Do not disturb sand bed after it has been screeded.

8. PAVER PLACEMENT

Begin placing paving stones on the screeded sand bed in the desired pattern. Hand place the paving stones with a hand tight joint. Work from the paving stone side of the installation as they are set. To achieve the best mixture of colors and blends, remove pavers from delivered bundles section by section, not layer by layer, and work from several bundles at a time. Cut pieces as needed to fill in the pattern.

FINISHING

When complete, sweep surface clean. Spread a fine jointing sand over the entire surface and broom sweep to fill all joints. Leaving excess sand on the paving stone surface, tap the paving stones into the setting bed with the mechanical plate compactor with a rubber pad. Broom sweep more sand to fill any open joints. Finally, backfill over the top edge restraint and grade. Your installation is now complete and ready for use.

RETAINING WALL INSTALLATION

MATERIALS NEEDED

- Gloves
- Tape Measure
- Stakes
- Shovel
- 3 lb. Hammer
- Levels
- Line Level
- Carpenters Square
- String Line
- Broom
- Wheelbarrow
- Pry Bar
- Wire Cutters
- Mason's Chisel
- Markers
- Screed Board
- Two 1" o.d. Screed Pipes
- Plate Compactor
- Paver Cutter
- Diamond Blade Table Saw

NOTE: The following Installing procedures apply to all Nicolock retaining wall units constructed as a conventional gravity wall system.

PREPARING/EXCAVATING: Before beginning excavation, make sure there are no utility lines in the wall area. Excavate area to the proper depth. For geogrid-reinforced retaining walls or for more detailed information, consult your local distributor or contact Nicolock.

For most non-critical walls (and under favorable soil conditions) Nicolock wall units are constructed as a conventional gravity wall system. Walls up to 3 feet in height are attainable without the need for soil reinforcement (geogrid). Recommended installation procedures should be followed to ensure the life of your wall structure.

1. SITE PREPARATION AND EXCAVATION

Excavate a trench a minimum of 6" beyond the front and back of the wall block. Dig trench 9" to 14" deep, enough to create a 6" thick leveling pad and to bury at least one whole wall block below grade. Compact the soil at the bottom of trench. Shape the slope behind wall to allow for 12" of drainage material.

2. INSTALL LEVELING PAD

Place filter fabric in trench and up the cut slope. Fill trench with clean, graded aggregate and compact.

3. PLACE BASE COURSE (FIRST ROW)

Position a level string line at the straight face of the unit to maintain alignment. Place the wall units side by side in the center of the prepared base. Bury the first course of block below grade to a depth equal to 10% of the height of the wall or a minimum of 6", whichever is greater. Level units from side to side, and front to back.

4. DRAINAGE SET-UP

Fill the space in front of wall with clean fill to grade to hold units from shifting. Place a perforated pipe behind wall on top of base for drainage. Fill any block cores and the drainage area with clean aggregate keeping filter fabric in place. Backfill soil on outer side of fabric and compact.

5. STACKING UNITS

Place successive courses by fitting the keys and grooves onto the units in the row below (if applicable). Keep the tops of each course clean to maintain a level surface. Stack units one layer at a time in a running bond pattern (crossing joints). Utilize geogrid when the wall height is 3 ft or more or as required by the project engineer or approved design drawings.

6. PLACE GRAVEL AND BACKFILL MATERIALS

Continue building the wall to the desired height. Backfill with clean aggregate behind each course as completed. Backfill and compact soil. Finish the wall by securing the wall cap with a suitable masonry adhesive.

*Geotextile may be necessary when the infill soil includes fine-grained sand that have the potential to infiltrate the gravel fill

Note: Illustrations shown are not for construction purpose. Please confer with your local engineer for proper placement of geogrid.

Important: Walls higher than 36" above grade, terraced walls, weak soils, and other loading conditions require special considerations in design and construction. This should be done by a qualified engineer & a professional contractor. Check with your local building department for code requirements.

STAIN REMOVAL

The stain removal methods suggested here are merely a guide and may not work to your satisfaction in all instances. Nicolock is not responsible for any damage caused while using these methods. Nicolock recommends that you keep several pavers from your initial installation available to replace any pavers that become damaged or excessively stained or soiled.

ALGAE & FUNGAL GROWTHS

Apply a fungicide according to manufacturer recommendation.

BEVERAGE STAINS

Scrub the stain with hot soapy water. For stubborn stains apply a 1:10 diluted sodium hypochlorite solution (household bleach) use according to the manufacturer's recommendations.

CHEWING GUM

Chewing gum is best removed with a suitable aerosol freezing agent before scraping it off. Use according to the manufacturer's recommendations.

FRESH OIL STAINS

Soak the oil up with an absorbent cloth or paper towels. Do not wipe. Then cover the affected area with a 'dry' absorbent powder and leave for 24 hours. Repeat until the powder has absorbed all or as much of the oil as possible.

If a stain persists, apply a recommended cleaner according to the manufacturer's recommendations.

PAINT /WOOD-STAIN /VARNISH

Soak up the spillage with an absorbent cloth or paper towels. Do not wipe. The stained area should be immediately scrubbed with scouring powder and water.

The stained area should be immediately scrubbed with detergent and water. Paint removers or solvents should not be used on stains that are less than a week old, as this will increase penetration into the concrete. Scrape off as far as possible. Apply an appropriate proprietary paint remover, preferably one supplied as a thick gel. Follow the manufacturer's recommendations or contact the paint manufacturer.

WOOD PRESERVATIVES /CREOSOTE

Soak the stain with mineral spirits and scrub with a hot detergent and water. Finally rinse thoroughly with clean water, or contact the manufacturer of the preserver.

ASPHALT & EMULSIFIED ASPHALT

Chill with ice (if warm outside), scrape away & scrub the surface with scouring or abrasive powder. Rinse with water.

CUTBACK ASPHALT & ROOFING TAR

Use a soft moist putty made with talc or diatomaceous earth (available wherever pools supplies are sold.) Mix with kerosene, scrub, let dry and brush off. Repeat as needed.

CANDY, KETCHUP, MUSTARD, GREASE DRIPPINGS FROM FOOD

For stubborn stains, apply liquid detergent full strength and allow it to penetrate for 20-30 minutes. Scrub and rinse with hot water. Removal is easier if these stains are treated immediately.

CAULKING

Scrape off excess and scrub with denatured alcohol. Rinse with hot water and detergent. For acrylic latex caulk - follow guidelines for removal of latex paint.

CLAY SOIL

Scrape off dry material, scrub and rinse with hot water and strong detergent.

CREOSOTE

Apply a solution made with paint thinner and talc. Scrub and allow to dry. Scrape off, scrub with scouring powder and rinse with water.

MORTAR

Let dry but not harden and carefully remove spots with a towel, putty knife or chisel.

LEAF, WOOD ROT OR TOBACCO STAINS

Apply household bleach diluted 10:1 with water (10 parts water) and scrub with a non-metallic stiff bristled brush.

OIL OR GREASE THAT HAS PENETRATED

Mop up any excess oil with rags. Cover the area with oil absorbent talc, (kitty litter). Diatomaceous earth can also be used. Leave it on the stain for a day, then sweep up.

PAINT

Fresh paint should be mopped up immediately with rags or paper towels by blotting. Do not wipe as this will spread the paint and extend the job of removal. If the paint is latex and water-based, soak and then scrub area with hot water, scouring powder and a non-metallic stiff brush until no more improvement is seen. Let the remaining paint dry and remove as described below.

DRIED PAINT

Scrape any excess oil-based paint, varnish or water-based latex paint off the surface. Apply a commercial paint remover and let sit for 20-30 minutes. Loosen with gentle scrubbing. Do not rub the loosened paint into the surface of the pavers. Instead, blot up the loosened paint and thinner. Repeat as necessary.

TIRE SKID MARKS

Scrub black area with water, detergent and scouring powder.

ABOUT EFFLORESCENCE:

Efflorescence is a whitish, powder-like deposit that may sometimes appear on the surface of the paving stones. It may appear immediately or within a short time after installation. Left alone, normal wear and exposure to the elements will dissipate the efflorescence. Efflorescence does not affect the structural performance or durability of concrete pavers. Efflorescence is a normal occurrence in all cement based products, as well as many colored paving products. Because it is a natural reaction to

the proper hydration of concrete, Nicolock accepts no responsibility or liability for replacement.

If there is a need to remove the efflorescence before it naturally wears away, best results are obtained by using an efflorescence remover which is available from most mason supply dealers. Do not use muriatic acid.

If a sealer is to be applied to the paving stones, it is recommended that any presence of efflorescence be removed prior to sealer being applied. For installations over a new or existing concrete base, a cementitious setting bed, or with mortared joints, the occurrence of efflorescence is more likely. Precautions for proper drainage of the paving stones system should be taken to minimize this occurrence.

WHAT IS EFFLORESCENCE?

Efflorescence is a natural phenomenon and can occur with any cement based product, as well as other paving products. It may appear randomly and will possibly appear more pronounced on colored paving slab.

The white bloom may give the impression that the color of the paving slab is fading but, when wet, you will find that the efflorescence vanishes and the paving slab returns to its original shade. The white bloom will often return again when the paving slab dries. Be assured that efflorescence has no detrimental effect on the performance of the paving slab and will generally disappear with time.

HOW DOES EFFLORESCENCE OCCUR?

All concrete products contain cement which produces water soluble calcium oxide (lime).

Concrete paving materials contain millions of tiny invisible pores; when moisture penetrates into these pores – either from rain, dew or condensation – it dissolves part of the lime to make calcium hydroxide.

When the slab dries out, the calcium hydroxide rises to the surface and reacts with the carbon dioxide in the air, sometimes leaving a white bloom of calcium carbonate once the water has evaporated.

WILL EFFLORESCENCE DISAPPEAR NATURALLY?

Yes. The efflorescence action is arrested by carbon dioxide reacting with calcium oxide within the pores of the concrete. The efflorescence itself is then, over a period of time, either converted back to soluble salts and washed away by rain or simply disappears through the action of trafficking, snow or ice.

Once the efflorescence has disappeared naturally it does not usually recur. It is therefore not necessary to replace the paving or to take other measures against efflorescence.

HOW LONG WILL EFFLORESCENCE LAST?

This is difficult to predict as factors such as climate, location and conditions (damp/shady or open/sunny) are variables which can affect the extent of the phenomenon. However, on average, it can take from 12 months to 24 months to disappear.

FAQ

WHY DO NICOLOCK PAVERS MAKE THE BEST PAVEMENT?

Not only are Nicolock pavers beautiful, but they provide the best pavement solution in freeze/thaw conditions, when installed over a compacted aggregate base. Installation over a compacted aggregate base results in a pavement that is strong, yet flexible enough to move as the ground shifts without breaking apart, rutting or heaving. In addition, they can be "unzipped" to allow for repairs or access to utility lines. Unlike asphalt and other surfaces, pavers are virtually maintenance-free. And, by definition, concrete pavers are about 3 times stronger than regular poured concrete.

WHAT MAKES PAVER-SHIELD™ BETTER THAN THE COMPETITION?

paver-**shield**™ is not a thin veneer of color coating. paver-**shield**™ pavers are guaranteed to look great year after year, retaining their vibrant color and smooth texture. Products without paver-**shield**™ may look worn and faded over time with exposed aggregate on the surface.

DOES THE COLOR GO ALL THE WAY THROUGH NICOLOCK PAVERS?

All Nicolock pavers have color throughout. Those manufactured with our exclusive paver-**shield**™ process have an extra concentration of cement and pigment on the wear layer providing deep rich colors and a smooth, dense wear layer.

CAN I USE A PRESSURE WASHER TO CLEAN MY PATIO?

Yes – but, as always, follow the manufacturer's instructions carefully. Do not pressure wash your patio too strongly or too frequently as you may damage the surface of the paver.

CAN PAVERS BE INSTALLED OVER A POURED CONCRETE BASE?

Absolutely, provided certain steps are taken. Care must be taken so that water does not pool underneath the pavers. Drainage holes should be drilled in large slabs and filled with pea gravel and covered with landscape fabric. Edge pavers must be restrained to keep joints from opening up.

CAN I USE A SEALER ON MY PATIO?

Yes – check proprietary manufacturer's instructions and suitability for sealing concrete paver. Please note: applying sealant to paver may affect the color.

HOW DO PAVERS COMPARE WITH PATTERNED CONCRETE?

Patterned concrete pavements are slabs of concrete that are embossed with a pattern. Therefore, they are prone to the same problems with freeze/thaw cycles, namely cracking and spalling. Also, unlike Nicolock pavers, patterned concrete pavements don't allow access to underground utilities or the ability to make repairs. At virtually the same price installed per square foot, Nicolock Pavers are clearly a superior choice.

HOW DO I DETERMINE HOW MUCH STONE BASE MATERIAL AND SAND SETTING BED MATERIAL I NEED?

One half ton of modified stone or sand will cover about 100 square feet at 1" thick. Using a 10' x 10' (100 square feet) patio as an example, you would need 1/2 ton of sand for the setting bed (1" thick) and 3 tons of modified stone for the base (6" thick). You'll need about 5% more sand for the joints between the pavers. The thickness of the base material depends on the application and subgrade soil conditions (use a thicker base for poorly drained soils). As a rule of thumb, you'll need 4" to 8" of base material for walkways and patios, and 8" to 12" for driveways and parking lots.

I HAVE WHITE DEPOSITS ON MY PAVERS/WALLS, WHAT IS IT?

You are probably referring to efflorescence, a natural and common occurrence in many concrete products. Efflorescence occurs when natural salts come to the surface and leave behind a white deposit that can normally be brushed off. This is not a product defect or harmful to pavers and walls and Nicolock accepts no liability for its occurrence. It will usually weather away with time.

HOW CAN I REMOVE MOSS OR MOLD FROM MY PAVERS?

Try liquid bleach diluted in water (10 parts water to one part bleach). Be careful not to get it on plant material. Keep in mind that there is nothing that will keep moss and mold from reappearing in a shady, damp area.

WHAT IS POLYMERIC SAND AND WHAT IS ITS ADVANTAGE?

Polymeric sand is a high-tech mix of graded sand and binder, specially formulated for filling joints between pavers. When installed properly, polymeric sand will remain in the paver joints and inhibit weed growth and insect infestation.

CAN I USE NICOSTONE PAVING INSIDE MY HOUSE?

Yes – but it is preferable to seal the paving with a sealer after laying inside to protect against stains and reduce incidence of dust.

WHY DO THE PAVING STONES HAVE DARK PATCHES?

This is due to differential weathering, where the surface of the paving has cured at different rates, causing darker color variation on the paving. Generally this is exaggerated by the presence of efflorescence which, once removed, will reduce the effect of the dark patches. As with efflorescence the dark patches will generally disappear with time.

HOW OFTEN SHOULD I CLEAN MY PATIO?

Regular washing and brushing should be adequate to maintain your patio in pristine condition. However, you may wish to clean your patio using a recommended cleaner. This can enhance its appearance but it may affect long term durability and should only be used sparingly (only two or three times during the

lifetime of the paving). Consult your paving supplier for advice and a suitable cleaning product.

WHAT ARE THE BENEFITS OF SEALING MY PAVERS? HOW LONG DO I NEED TO WAIT BEFORE I APPLY A SEALER?

Sealers help resist stain and may enhance the color. Some can also bind the sand in the joints to make it difficult for weeds to germinate. As a rule of thumb we generally want you to wait at least six months to allow any efflorescence to appear. Prior to the application of any sealers, the pavers must be cleaned with an appropriate product to remove dirt and efflorescence.

CAN NICOLOCK PAVERS BE USED FOR MY DRIVEWAY?

Absolutely! For residential driveways, 8" to 12" of compacted base material is recommended. A standard 2-3/8" thick paver can be used for light vehicular (cars & pickup trucks) applications. A herringbone pattern is most suitable in these situations. (Not applicable for Stone Ridge XL, Alpine series and Nicostone products.)

FAQ

Not only do Nicolock Pavers make an attractive pool deck, but they also provide a slip-resistant walking surface. Pavers actually are better than poured concrete around pools from the standpoint that the joints will take on moisture and leave the pavement cooler under foot. Like all products that are used outdoors, lighter colors will tend to stay cooler as they reflect the sunlight. Furthermore, our Fullnose and Pool Coping Pavers are ideal for the pool's edge. Make sure the base material around the pool is well compacted before installing pavers. Safety covers can also be installed over pavers with the use of special anchors.

WILL WEEDS GROW BETWEEN MY PAVERS?

Weeds and grass between pavers occur when seeds or spores lodge in the joints between pavers. They will not grow from underneath. This can be minimized by using polymeric sand or mixing a pre-emergent granular weed killer into the joint sand. If weeds do appear, a spot vegetation killer (such as Round-Up™) can be used and will not damage the pavers.

CAN I SHOVEL AND PLOW MY PAVERS?

Pavers can be plowed and shoveled just like asphalt, concrete and other pavement materials. In fact, snow and ice will normally melt faster because of the joints around the pavers. A plow blade with a rubber edge is recommended when needed. Do not use sharp objects to chop ice as they can damage the pavers.

WHAT SHOULD I USE TO MELT SNOW AND ICE ON MY PAVERS?

Nicolock recommends sand for slip resistance as it is the most environmentally friendly product for use on concrete products to make sure surfaces are skid and slip resistant.

If a de-icing product is used, Nicolock recommends using only NaCl (rock salt) and should be used sparingly, following the manufacturer's instructions. Once ice is loosened, remove immediately to avoid buildup of the de-icing agent.

De-icing agents of any kind are not recommended for our Nicostone line. We recommend using only sand for providing skid and slip resistance.

I'VE GOT A RAILROAD TIE WALL THAT IS ROTTING AND FALLING DOWN. WHAT CAN I DO?

Our segmental retaining wall systems provide an excellent solution to this problem. They are strong and will last a lifetime. Nicolock offers several different wall systems to meet your needs.

WHAT IS GEOGRID AND WHEN SHOULD IT BE USED?

As a rule of thumb, all walls over 3' high should be reinforced with geogrid. Geogrid is placed between the layers of block at different intervals to stabilize the soil behind the retaining wall and secure the wall face to the earth behind it. The height of the finished wall, soil characteristics, and the pressure on the wall caused by slopes, structures, and/or paved areas all affect the proper placement and lengths of geogrid.

WHAT IS RECONSTITUTED STONE?

Reconstituted Stone – is manufactured from the highest grade materials and will last for years. It is hand crafted, with molds taken from original natural stone for an authentic appearance. Nicostone products are a consistent thickness and are therefore easy to lay.

Colors – shades are subtle and subject to slight variations, especially highlighted in the weathered shades where many products are hand made to ensure a completely random, natural look. Colors will appear different depending upon the prevailing conditions such as sunlight, heavy shade or rain.

Therefore it is advisable to check the color and appearance of the actual product samples in dry daylight conditions before purchasing. Where possible, products should also be selected from the same production batch. Reconstituted stone will weather over time in a fashion similar to natural stone.

PAVING SLAB AND WALLSTONE COLOR

Please note that some products have a multi-color mix where the manufacturing process means that different color percentages are likely selected from multiple pallets prior to installation. Choose from three to five different packs.

Multi-colored products are produced randomly, therefore color proportions in different slabs may vary widely.

APPLICATION/SUITABILITY

Unless otherwise stated, the Nicostone materials featured in this catalog are intended for use in residential landscape projects. Nicostone decorative slabs are not suitable for driveways. The manufacturer cannot accept any liability where products have been used for any inappropriate purpose.

In the unlikely event of products reaching you in a less than satisfactory condition, please contact your local distributor directly, allowing time for the rejected product to be replaced. If a complaint is raised after laying the product, Nicostone cannot accept responsibility for any defect.

De-icing salts should not be used on Nicostone slabs.

SIZES & JOINT WIDTHS

All dimensions quoted in this catalog are nominal and are for guidance only. Actual sizes will vary, particularly on the products designed to replicate natural stone which have features such as riven profiles and fettled edges. Where space is critical, Nicostone recommends dry laying the product to check area required.

When laying random slabs and circles, and in particular Old Town Flagstone Paving Slabs with their fettled edges, joint widths will depend on the slab type & laying pattern chosen and will be variable – from approximately 1/2" to 1".

HANDLING

Standard manual handling techniques should be adopted when handling products. Some products in the Nicostone range are heavy or an awkward shape to lift and it is recommended that suitable lifting equipment be used for these products. Always wear gloves and safety footwear when handling product.

If product is to be cut, always wear safety goggles and when using a high speed saw also wear suitable respiratory protection, such as a dust mask.

Before removing wrapping or banding, ensure that the products are on level ground or retained in some way to prevent them from tipping over. When removing, shrink wrapping and banding use the appropriate cutting tools; also it is recommended that safety goggles are worn.

Product should always be handled with care as breakages, chipping and other damage may result from mishandling. Minor scuffing can occur due to movement in transit and will generally disappear in time. If in doubt do not install the product, consult your Nicolock Territory Manager.

SPECIAL NOTES

All measurements are nominal. Dimensions include the joint widths when fully installed. Dimensions/height: May vary up to 1/4" due to unique manufacturing technique. Nicostone provides only general installation guidelines, climate and soil conditions may vary by region.

PATTERNS

Patterns, whether simple or complex, help to define a paved area and add your own personality to your project. The following are examples of popular patterns.

RUNNING BOND

Products that can be used:

- Plank Paver
- Ridge Brick
- Rustico 6x6
- Rustico 6x9
- Holland Stone
- Colonial Cobble 1.5 Normal
- Heritage Slab
- Old Vienna with paver-shield™
- The Montauk
- Euro Cobble
- Eco-Ridge
- SF-Rima

RANDOM 3-PIECE RECTANGULAR & STAGGERED RUNNING BOND

Products that can be used:

- Stone Ridge
- Stone Ridge Contemporary
- Alpine Ridge
- Alpine Contemporary
- Blue Ridge
- Eco-Tre
- Natural Cleft Flagstone (Individual Sizes)
- Thermal Finish Flagstone (Individual Sizes)

HERRINGBONE

Products that can be used:

- Plank Paver
- Ridge Brick
- Rustico 6x9
- Holland Stone
- Colonial Cobble 1.5 Normal
- Old Vienna with paver-shield™
- Eco-Ridge

RANDOM 3-PIECE SQUARE & DIAGONAL PATTERN

Products that can be used:

- Stone Ridge XL

BASKET WEAVE

Products that can be used:

- Plank Paver
- Ridge Brick
- Holland Stone
- Old Vienna with paver-shield™
- Eco-Ridge

RANDOM 6-PIECE PATIO PACK

Products that can be used:

- Natural Cleft Flagstone Patio Pack
- Thermal Finish Flagstone Patio Pack
- Old Town Flagstone Patio Pack

RANDOM 4-PIECE

Products that can be used:

- Rustico 4 Pc Combo

FRENCH ASHLER PATTERN

Products that can be used:

- Versailles Travertine

MODIFIED HERRINGBONE & 'I' PATTERN

Products that can be used:

- Rustico 6x6 & 6x9

Please use patterns as a reference to get you started. The diagrams shown may require additional material if followed directly.
