INSPIRING ARTSCAPES

TECHOSPEC

HARDSCAPER'S HANDBOOK – VOLUME 22

Hexa 60 mm slab in Chestnut Brown, Beige Cream, Greyed Nickel and Onyx Black

Inspiring Artscapes

You're not looking to blend in,
but rather stand out from the crowd.
We take that philosophy to the outdoors,
reshaping the idea of what
landscapes can look like.

WE LIVE TO CREATE

IMPORTANT INFORMATION

A STANDARD OF CARE

The care of high quality concrete products is similar to the care of any product left in the environment 365 days and nights per year. Very mild cleaning using detergents, water and product specific chemicals is necessary and similar to cleaning patio furniture, a vehicle's chrome, plastic, or paint, etc. in order to enhance their presence and charm. Protectants of all types (high, middle, and low sheen, pigmented/tinted, penetrating or film-forming) are available for additional protection from acid rain, stains and nature's worst. To get the most from your investments take care of them and they'll take care of you.

For any questions on industry-specific cleaners and protectants, see your local hardscape dealer, contact your contractor, contact us or search online.

It is contrary to Techo-Bloc's Standard Operating Procedures (SOP) to be involved in the care of a mature pavement or retaining structure. Care, as mentioned above, is the responsibility of the owner for any and all outdoor products.

NCMA disclaimer: "In areas where segmental retaining walls will be repeatedly exposed to snow (such as from plowing operations) consider periodically applying sealants or water repelling chemicals (silane or siloxane compounds) to the wall surface."

COLOR

Due to the inherent nature of printed literature and current digital media, Techo-Bloc cannot guarantee specific color matching to printed representations of its color swatches.

Each color option is composed of a variety of darker & lighter tones. Natural ingredients such as granite are present within the recipe to allow for a range in tones, veining and textures from one stone to another. Therefore, colors samples shown are approximate representations of our standard colors and actual product colors may vary.

Final color selection should be made at your local dealer from stocked product. Techo-Bloc always recommends immediately verifying the product and colour upon reception. If there are any discrepancies, contact your local dealer before continuing your project. Installation of the product constitutes your acceptance of the product as is.

EFFLORESCENCE

This warranty does not apply to efflorescence. Efflorescence is a naturally-occurring process in all concrete products which sometimes appears in the form of a white powdery film on the pavement surface. Efflorescence is more perceivable in darker colours such as Onyx Black and Chocolate Brown as there is a higher level of contrast than with other blended colours. It does not, in any way, compromise the functionality or the structural integrity of the product. Although efflorescence cannot be prevented, it will wash off over time or can be cleaned with efflorescence cleaner. Techo-Bloc accepts no responsibility or liability for this condition.

POLYMERIC HAZE

Polymeric haze from the use of polymeric joint sand may appear on your concrete products if the sand was not removed from the surface of the paver properly. This does not, in any way, affect the integrity of the product or your installation. The hazing will weather away naturally with time and rain. It can be removed with a specialized cleaner; you are advised to contact your contractor or the polymeric sand company used for instructions & recommendations. Techo-Bloc accepts no responsibility or liability for this occurrence.

CONSTRUCTION RESIDUE

A by-product of cutting with a saw is residue-filled water or concrete dust. Residue filled water or re-hydrated dust can cling to the surface and leave a concrete stain. It is recommended to wash and remove the water or concrete dust from the surface of the pavers before it dries. Construction residue can also happen through soil disturbance or environmental elements. These contaminants should be removed immediately but do not affect the integrity of the product or your installation. Techo-Bloc accepts no responsibility or liability for these occurrences.

PROPER COLOR DISTRIBUTION AND LAYING TECHNIQUES

Proper installation enhances the overall color of pavement. Units should be randomly picked from at least two pallets when installing. This creates an attractive and subtle blending of color.

COMPACTOR AND SNOW REMOVAL EQUIPMENT

Pavers with an embossed surface (high and low points) are more susceptible to scuff marks from vibratory plate compactors used in most concrete paver installations. Techo-Bloc recommends the use of a urethane mat between the plate and the paver surface during compacting. Contact your equipment supplier for more information about accessories for this purpose. Also, snow removal equipment should have the proper spacing, bumpers, and rubber blade guards to protect the surface of the pavers. Techo-Bloc is not responsible for damage caused by the misuse of compaction or snow removal equipment, which may leave scuff marks, or burns on pavers.

NOTE:

For industry information about efflorescence, polymeric haze or information pertaining to installation specifications, please visit www.icpi.org or www.ncma.org.

INSTALLATION GUIDES:

The installation diagrams are only a guide or a reference and cannot cover all possible situations. Therefore, Techo-Bloc declines all responsibility regarding the applicability of the installation diagrams with regards to any specific site. The customer is fully responsible for product installation and Techo-Bloc recommends the use of qualified professionals, such as an architect, a master contractor or an engineer who will be able to customize the installation diagram to the specific site conditions.

LIMITED WARRANTY

The warranty applies to concrete landscaping and masonry products (herein referred to as "products") intended for residential use and manufactured by the Techo-Bloc group.

All Techo-Bloc products comply with applicable standards established by the American Society for Testing and Materials (ASTM) and the Canadian Standards Association (CSA).

Techo-Bloc offers a transferable life-time warranty on its products, commencing on the date of delivery. The warranty covers the structural integrity of the products and any abnormal deterioration of its surfaces that may be caused by the use of rock salt (sodium chloride [NaCl]) for de-icing pavers, slabs or steps, with the exception of Stonedge collection products, unless otherwise stated.

THE FOLLOWING CONDITIONS OR EVENTS ARE NOT COVERED BY THE WARRANTY:

1. Claims regarding the color, size, or texture of a product already installed. An installed product confirms the acceptance of the product received.
2. Use of rock salt and transferability of warranty on Stonedge Collection products (wet cast products) unless otherwise stated.
3. Splitting, chipping or other breakage caused by impact, abrasion or overloading.
4. Damage or loss caused by the movement or settling of the underlying structure or base components upon which the products are set.
5. Damage or loss caused by design or installation not in compliance with local codes, industry standards or the guidelines provided by the Interlocking Concrete Pavement Institute (ICPI), the National Concrete Masonry Association (NCMA) or Techo-Bloc.
6. Damage or loss caused by natural disaster including, but not limited to, earthquakes, floods or other similar events.
7. Acts of negligence or misuse by the owner, installer or any third party.
8. Color matching to printed representations.
9. Efflorescence, polymeric haze or construction-born residue. (See important information section for terminologies)
10. Damage or loss caused by the operation of compaction or snow removal equipment.
11. Normal behavior, wear and tear such as variation in colors or shades.

In the event of product failure within the scope of this warranty, Techo-Bloc will replace the affected units only, following a site inspection and assessment of the products by Techo-Bloc or its representatives. Techo-Bloc's responsibility is limited to the cost of the product only and not to the costs related to the installation or replacement of said products. Techo-Bloc will honor this warranty only with a proof of purchase, such as an invoice or delivery slip.

THE DESIGN PLAYGROUND

COLORS

We love naturals. Thoughtful planning of our color selection means that all your favorite shades show up in multiple collections, making it easy for you to mix, match and contrast to your heart's content. Refer to our color coordinate on page 18 to find which products are available in your favorite colors.

Natural ingredients are present within the recipe to allow for a range in tones, veining and textures from one stone to another. Color samples are for reference only and actual product colors may vary.

¹ Paving units with this color have potential Solar Reflectance (SR) of at least 0.33 and/or Solar Reflectance Index (SRI) of at least 29. These values may change for the same color depending on the finish and local aggregates. See page 17 for specific SR and SRI values.

SCALE

Mind the scale you're working with. Larger stones are fit for grand spaces while smaller ones are ideal for banding, contouring and mosaics.

SHAPES

Ready for something different? There's a lot more to paving stones than just right angles. From classic to creative, explore all the options — then let them be the building blocks for your next big idea.

CLASSIC

The straightforward angles of squares and rectangles forever stand the test of time, laying the groundwork for a look that never goes out of style.

GEOMETRIC

From Diamond to Hexa to Triangle and more, we offer at least as many possibilities as you have ideas for mixing and matching these unique geometric shapes.

NATURAL

Soften the edges and inject an element of creative contrast with nature-inspired textures, shapes and finishes.

PAIRINGS

From coordinated color schemes to flawless finishes, backyard blends are made easy with our cross category collections. Discover the perfect design pairing for your outdoor space that focuses on seamless surfaces from top to bottom.

TONE ON TONE

Same, but different. We color-match across our collections, making it easy to mix textures, shapes and sizes.

Graphix wall, Raffinato cap and Diamond paver in Greyed Nickel

THE TEXTURED TOUCH

Win by playing the same game. From slabs to pavers to copings and beyond, discover the beauty of working within one consistent texture.

Travertina Raw slab, paver, wall, and cap in Ivory

NATURE FINISHES FIRST

Different products, one-of-a-kind feeling. Keeping with a similar finish across collections creates an effortlessly natural or rustic-feeling cohesiveness.

Everest slab, Valet paver, Röcka wall, and Piedimonte cap

SOLAR REFLECTANCE & LEED CREDITS

Solar reflectance index (SRI) is a value that incorporates solar reflectance (SR) and thermal emittance in a single measure. The SRI is an indicator of how well a surface reflects (reflectance) and release absorbed solar radiation (emittance). The lower the SRI, the hotter a material is likely to become in sunlight. Dark pavement surfaces tend to have lower solar reflectance values than lighter pavement surfaces. Thus, cautious selection of pavement surface colors can help reduce heat islands which cause urban areas to stay warmer and contributes to air pollution and increased energy consumption. Nowadays, it is not uncommon for some municipalities in North America to require the use of paving materials with an initial SRI of 29.

TECHO-BLOC COLORS WITH SR OF AT LEAST 0.33 AND/OR SRI OF AT LEAST 29

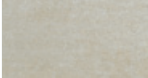

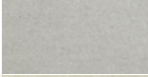

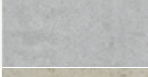

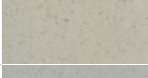

Furthermore, for LEED certification there are credit requirements for Sustainable Sites Credit: Heat Island Reduction.

The following are some key elements for Nonroof and Parking under cover applications (see LEED v4.1 for a thorough information):

- **Nonroof** (2 points except Healthcare, 1-point Healthcare): Use of paving materials with an initial SR value of at least 0.33.
- **Parking under cover** (1 point): Any roof used to shade or cover parking must have a three-year aged SRI of at least 32 (if three-year aged value information is not available, use materials with an initial SRI of at least 39 at installation).

Techo-Bloc light-colored paving units contribute to the reduction of heat island effects and to obtain LEED points. The table to the right summarizes the colors of Techo-Bloc paving units with SR of at least 0.33 and/or SRI of at least 29.

The values shown in the table may change slightly for the same color due to variations in local aggregates. Contact your Techo-Bloc Representative for our current list of SR and SRI values

FINISH	COLOR	SWATCH	SOLAR REFLECTANCE ¹	SOLAR REFLECTANCE INDEX ²
HD ²⁺ Smooth	Beige Cream		0.35	38
	Greyed Nickel		0.36	39

HD ² Slate (wetcast)	Victoria		0.31	33
HD ² Brushed Travertine (wetcast)	Ivory		0.35	38

NOTES

1. Solar Reflectance measurements in accordance with ASTM C1549 "Standard Test Method for Determination of Solar Reflectance Near Ambient Temperature Using a Portable Solar Reflectometer".
2. Solar Reflectance Index (SRI) calculated in accordance with ASTM E1980 "Standard Practice for Calculating Solar Reflectance Index of Horizontal and Low-Sloped Opaque Surfaces".

COLOR COORDINATE

For an authentic look, each color option is composed of a variety of darker & lighter tones. Natural ingredients such as granite are present within the recipe to allow for a range in tones, veining and textures from one stone to another. Final color selection should be made with your contractor from product samples or at your local dealer from stocked product. This color chart serves as a guide for color selection across product lines.

Exclusive Technologies

NATURAL LOOK. UNPARALLELED DURABILITY.

At Techo-Bloc, we believe that no one should have to compromise between style and durability when choosing their landscaping products. That is why we work tirelessly to develop the best pavers and slabs to revive your outdoor spaces and ensure that they stand up to the test of time even in the harshest of climates.

HD² (High Definition & Density) technology is a face-mix manufacturing process fusing two engineered layers that delivers a paving stone with enhanced finish, enriched color and greater strength.

The surface layer is composed of fine wear-resistant, durable aggregates and concentrated color that delivers smoother textures and richer color. The base layer uses a mix with coarser aggregates that gives the paving stone its strength. This manufacturing process from Techo-Bloc creates the optimal paving stone.

*The factory seal on HD²+ products has a lifetime of up to 3 years, depending on product usage.

WORRY LESS. RELAX MORE.

Developed to seal in the beauty of wetcast products, Klean-Bloc technology creates an advanced protective barrier against everyday wear and tear. Enjoy the beauty and character of natural materials like travertine and wood grain, without the worry of maintenance.

Notes:

1. For this application, it is recommended that this product be installed on a concrete base as designed by a local Engineer.
2. The installation of this product on an aggregate base will provide an acceptable performance. For a superior performance, this product can be installed on a concrete base.
3. De-icing salt shall not be used on this product.
4. Pavers on bituminous-sand set in vehicular applications require the thickness tolerance to be +/- 1/16 in. (1.5 mm).
5. Meets the Americans with Disabilities Act (ADA) design guidelines for accessible paths:
 - Slip resistant paver surface
 - Paver joint openings do not allow the passage of a sphere greater than 1/2 in. (13 mm) in diameter
6. Tumbled or embossed pavers could result on surfaces or edges unsuitable for ADA applications.

RESIDENTIAL

Pedestrian: Pedestrian use (e.g. patios and walkways).

Residential / Vehicular: Residential vehicle use (e.g. driveways).

COMMERCIAL

Pedestrian only: Pedestrian at all times, no cars, service vehicles or other mobile equipment (e.g. courtyards, parks and pedestrian walkways).

Pedestrian Plaza: Primarily pedestrian but occasionally subjected to service vehicles (e.g. maintenance, snow removal or emergency vehicles).

Parking lots: Parking areas and access ways for cars, SUVs and pickup trucks occasionally subjected to delivery and garbage trucks (e.g. parking and access ways for malls, offices and multi-storey residential buildings).

Secondary streets: Roadways with mostly automobile traffic and occasional trucks and bus traffic (e.g. residential streets, local roads)

Main streets: Roadways with general traffic mix and where heavy vehicles are a regular component of the daily traffic volume (e.g. boulevards, collectors and arterials).

CONCRETE GRID PAVER - AQUASTORM (GRASS INFILL)

CONCRETE GRID PAVER - AQUASTORM (AGGREGATE INFILL)

PLEASE REFER TO P.4 FOR THE CORRECT USE AND LIMITATIONS OF PROVIDED TECHNICAL INFORMATION.

INSTALLATION GUIDE

PERMEABLE PAVER - FULL INFILTRATION TO SOIL SUBGRADE

PERMEABLE PAVER - PARTIAL INFILTRATION TO SOIL SUBGRADE

PERMEABLE PAVER - NO INFILTRATION TO SOIL SUBGRADE

INSTALLATION ACCORDING TO NOMINAL DIMENSIONS

The nominal dimension of a paving unit (width or length) represents the absolute distance between the half-joint on one side of the paving unit and the half-joint on the opposite side. The paving units must be laid while respecting their nominal dimensions. Installed pavers must be neither too tight nor too loose to ensure the performance and integrity of the pavement in service.

Here is an example where pavers of nominal dimension 600x100 mm are laid next to 600x300 mm pavers. If the installation is done according to the nominal dimensions (mid-joint to mid-joint), then at each 600 mm the ends of the pavers will coincide. Otherwise, the installation will be considered tight or loose.

PAVING UNITS – JOINT WIDTH

The space between the paving units (excluding the spacer), i.e. the joint width (J), will depend on the thickness of the spacer (T) and the free space (e) between the spacer and the edge side (or spacer) of the adjacent paving unit. To these dimensions are added the dimensions of the chamfer (Ch) and flat shoe (Cf) to determine the joint width on the surface (Js) of the segmental concrete pavement.

Note: The dimensions shown in this table can differ for paving units with slate texture or other type of embossed texture. SLEEK joint width will depend on the spacer position: (i) front to front (largest dimension) or (ii) staggered (smallest dimension).

PAVER	HEIGHT		NOMINAL JOINT WIDTH (J)		JOINT WIDTH ON THE SURFACE (Js)		CHAMFER			SPACER	
	H		J1	J2	Js1	Js2	FLAT SHOE Cf	VERTICAL Cv	HORIZONTAL Ch	THICKNESS T	FREE SPACE e

PHYSICAL AND GEOMETRICAL CHARACTERISTICS

CHARACTERISTICS		ASTM C1782	CSA A231.1:19
Flexural strength		725 psi [5.0 MPa]	5.0 MPa min.
Freeze-thaw durability		Mass loss (max.): 225 g/m ² at 28 cycles, or Mass loss (max.): 500 g/m ² at 49 cycles	Mass loss (max.): 225 g/m ² after 28 cycles, or Mass loss (max.): 500 g/m ² after 49 cycles
Dimensional tolerances (see Notes below):	Length & Width	Units up to and including 24 in. [610 mm]: -0.04 in. [1.0 mm] and +0.08 in. [2.0 mm] Units over 24 in. [610 mm]: -0.06 in. [1.5 mm] and +0.12 in. [3.0 mm]	-1.0 mm to +2.0 mm
	Thickness	± 0.12 in. [3.0 mm]	± 3.0 mm
	Warpage	± 0.08 in. [2.0 mm] (Units up to and including 17.75 in. [450 mm])	± 2.0 mm (Units up to and including 450 mm)
		± 0.12 in. [3.0 mm] (Units over 17.75 in. [450 mm])	± 3.0 mm (Units over 450 mm)

Notes:

1. The dimensional tolerances shown above are prior to the application of architectural finishes.
2. The dimensional tolerances (length, width, thickness, and warpage) stated above apply for dry cast slabs only. In order to obtain a more realistic appearance to natural stone, wet cast (Stonedge collection) slabs are intended to have a slightly larger variance in their dimensions than dry cast slabs. Stonedge collection of wet cast slabs include, but are not limited to, the following products: Aberdeen, Borealis, Inca, Maya and Travertina Raw.

INSTALLATION GUIDE

SLABS

INSTALLATION OUTLINE

01 EXCAVATION

- A. Before excavating, call all the local utility companies (e.g., phone, gas, electrical) to ensure that the area in which you plan to dig is clear of underground cables or wires. If any are found, please notify the appropriate companies before you continue.
- B. When excavating, it is important to achieve a slope in increments of $\frac{3}{16}$ " per ft (5 mm per 300 mm) which will allow for proper drainage. The excavation should mirror final grade of pavement.
- C. The width of the base behind the edge should be equivalent to the thickness of the base.
- D. With the help of a rake, grade the bottom of the excavated area. If the natural soil is granular or sandy we recommend that you compact the soil with a vibrating plate. If the soil is clay-like, change the soil with a blend of lime and crushed stone prior to compaction. Next, cover it with a layer of geotextile membrane to prevent the contamination of the base (clay and 0- $\frac{3}{4}$ " [0-20 mm] crushed stone). Refer to the table "**Thickness of the Granular Foundation**" (on next page) to find the minimum thickness of foundation required.

02 FOUNDATION

- A. Install the 0- $\frac{3}{4}$ " (0-20 mm) crushed stone base in 4" (100 mm) lifts with a minimum 5,000 lbf (22 kN) vibrating plate compactor.
- B. To facilitate compacting, wet the base material thoroughly and compact with a vibrating plate proceeding in all directions. Continue this process until you achieve the desired height. At this stage, you can verify the final height with the help of a paver.
- C. Base tolerance $\pm \frac{3}{8}$ " (10 mm) for every 10' (3-m) increment.

03 THE SETTING BED

- A. On the compacted crushed base, install two pipes with an outside diameter of 1" (25 mm). Grade the concrete sand with the help of a straight edge (or Quick-E leveler). If the base isn't properly graded and smooth, imperfections will be evident in the finishing grade of the pavement.
- B. Once the setting bed is graded, pre-compact with a hand tamper, then lightly fluff.

04 INSTALLATION OF SLABS

- A. Once the choice of slabs and the design have been finalized, it is recommended you start installing the slabs at a 90-degree angle. To obtain a 90-degree angle, use the rule of a 3/4/5-triangle. To do this, proceed as follows: measure a first horizontal line of 3' (1-m) and a second line of 4' (1.2 m) perpendicular to the first. Connect a third straight line of 5' (1.5 m), which will form a triangle, and the result will be a perfect 90-degree angle. While installing the slabs, walk on the installed slabs and fill in gaps caused by the pipes with concrete sand.
- B. It is always recommended that you use more than two cubes at a time in order to maximize the color blends. Furthermore, you should proceed with the cubes from top to bottom.
- C. You may use a chalk line to mark the stones to be cut along the borders, using a concrete saw. When cutting slabs, we recommend you wear protective ear and eyewear.
- D. Once you finish installing the slabs, you can then install Belgik, Pietra, Tundra, or Avignon curbstone. To keep curbs in place, add mortar along the back between the ground and the curbstone or, when available, use their plastic retention systems.

05 FILLING IN JOINTS

- A. Spread out the polymer stabilizer sand on the slabs, and sweep in between joints in all directions.
- B. Remove excess sand and follow the instructions exactly as indicated on the polymer stabilizer sand packaging.
- C. The use of a vibrating plate is not recommended on slabs.

INSTALLATION GUIDE

SLABS

VIBRATING PLATE ALERT!

We do not recommend passing the vibrating plate on slabs.

THICKNESS OF THE GRANULAR FOUNDATION¹

RESIDENTIAL PROJECTS	TYPE OF EXISTING SOIL	
	Clayey or Silty ²	Sandy or Gravelly
Patios and Walkways	6" to 8" (150 to 200 mm) Minimum	4" to 6" (100 to 150 mm) Minimum

1. Data shown in this chart are provided as guidelines only. The range of values suggested depends particularly on existing soil conditions. The thicker the granular foundation, the greater the increase in stability of the whole structure.
2. In the case of unstable soils or ones particularly affected by the freeze-thaw cycles, a thicker foundation may be necessary. For soils with these conditions or for commercial, industrial, or institutional works, a geotechnical professional should be consulted.

ABERDEEN

DESCRIPTION: Slab **TEXTURE:** Klean-Bloc Slate

PALLET OVERVIEW - 20"x10" AND 20"x20"

PALLET OVERVIEW - 30"x10"

Klean-Bloc technology
See page 24.

NOTES

Palletized upright.

*For an authentic look, each color option is composed of a variety of darker & lighter tones. Natural ingredients such as granite are present within the recipe to allow for a range in tones, veining and textures from one stone to another.

See page 35 to 37 for more technical information.

See page 29 for more information about applications.

DESCRIPTION: Slab **TEXTURE:** Klean-Bloc Wood

PALLET OVERVIEW - 5x30

PALLET OVERVIEW - 10x30

Klean-Bloc technology
See page 24.

NOTES

Palletized upright.

*For an authentic look, each color option is composed of a variety of darker & lighter tones. Natural ingredients such as granite are present within the recipe to allow for a range in tones, veining and textures from one stone to another.

In order to obtain a more realistic appearance to natural stone, wet cast (Stonedge collection) slabs are intended to have a slightly larger variance in their dimensions than dry cast slabs. See Notes for dimensional tolerances on page 35.

See page 35 to 37 for more technical information.

See page 29 for more information about applications.

IMPORTANT: When installing Borealis 5x30 or Borealis 10x30, it is recommended to have a gap between $\frac{1}{16}$ and $\frac{3}{16}$ in. (2 and 5 mm), between the units, to allow the sand to enter between each unit.

INDUSTRIA SLAB

DESCRIPTION: Slab **TEXTURE:** HD² Smooth , HD² Granitex or HD² Polished

PALLET OVERVIEW

EXPANDING DESIGN HORIZONS WITH LIVEABLE ROOFTOPS.

COOL ROOF

High Solar Reflectivity

LENGTHENS ROOF LIFE SPAN

Protects the waterproofing membrane from UV rays and accidental perforations.

EASY ACCESS FOR MAINTENANCE

When installed on pedestals, INDUSTRIA slab can be moved for roof system maintenance.

NOTES

See page 35 to 37 for more technical information.

See page 29 for more information about applications.

HD² Polished and HD² Granitex is made-to-order, minimum order of 500 sq. ft. Deposit required.

Allowable load Capacity of slab on pedestal set (including a safety factor of 2): 1441 lb (653 kg)

Specifications per pallet		Imperial	Metric
Smooth and Granitex	Cubing	54.25 ft²	5.04 m ²
	Approx. Weight	1 567 lbs	711 kg

MAYA

DESCRIPTION: Slab **TEXTURE:** Natural stone (Slate)

PALLET OVERVIEW

NOTES

Palletized upright.

It is preferable to lay the stones in a random configuration.

Each pallet contains a variation of four different shapes.

*For an authentic look, each color option is composed of a variety of darker & lighter tones. Natural ingredients such as granite are present within the recipe to allow for a range in tones, veining and textures from one stone to another.

In order to obtain a more realistic appearance to natural stone, wet cast (Stonedge collection) slabs are intended to have a slightly larger variance in their dimensions than dry cast slabs. See Notes for dimensional tolerances on page 35.

See page 35 to 37 for more technical information.

See page 29 for more information about applications.

Absorption	5 % max.	–
Freeze-thaw durability	Mass loss (max.): 225 g/m ² at 28 cycles, or Mass loss (max.): 500 g/m ² at 49 cycles	Mass loss (max.): 225 g/m ² after 28 cycles, or Mass loss (max.): 500 g/m ² after 49 cycles
Dimensional tolerances (see Notes below):	Length and Width: ± 0.063 in. [1.6 mm] Thickness: ± 0.125 in. [3.2 mm]	Length and Width: -1.0 mm to +2.0 mm Thickness: ± 3.0 mm

Notes: The dimensional tolerances shown above are prior to the application of architectural finishes.

INSTALLATION GUIDE

INTERLOCKING CONCRETE PAVEMENT

INSTALLATION OUTLINE

01 EXCAVATION

- A. Before excavating, call all the local utility companies (e.g., phone, gas, electrical) to ensure that the area in which you plan to dig is clear of underground cables or wires. If any are found, please notify the appropriate companies before you begin.
- B. When excavating, it is important to achieve a slope in increments of 1.5% ($\frac{3}{16}$ " per ft/5 mm per 300 mm), which will allow for proper drainage. The excavation should mirror the final grade of pavement.
- C. The width of the base behind the edge should be equivalent to the thickness of the base.
- D. Using a rake, grade the bottom of the excavated area. If the natural soil is granular or sandy, we recommend that you compact the soil with a vibrating plate. If the soil is clay-like, change the soil with a blend of lime and crushed stone prior to compaction. Next, cover it with a layer of geotextile fabric to prevent the contamination of the base (clay and 0- $\frac{3}{4}$ " [0-20 mm] crushed stone). Refer to the table "**Thickness of the Granular Foundation**" (on next page) to find the minimum thickness of foundation required.

02 FOUNDATION

- A. Install a 0- $\frac{3}{4}$ " (0-20 mm) crushed stone base, in 4" (100 mm) lifts with a minimum 5,000 lbf (22 kN) vibrating plate compactor.
- B. To facilitate compacting, wet the base material thoroughly and compact with a vibrating plate proceeding in all directions. Continue this process until you have achieved the desired height. At this stage, you can verify the final height with the help of a paver.
- C. Base tolerance $\pm\frac{3}{8}$ " (10 mm) for every 10' (3-m) increment.

03 THE SETTING BED

- A. On the compacted crushed base, install two pipes with an outside diameter of 1" (25 mm). Grade the concrete sand with the help of a straight edge (or Quick-E leveler). If the base is not properly graded and smooth, imperfections will be evident in the finishing grade of the pavement.
- B. Bedding sand should not be compacted until all paving stones have been laid down. Passing the vibrating plate over the paving stones causes them to settle approximately $\frac{3}{8}$ " (10 mm) into the bedding sand.

04 INSTALLATION OF PAVING STONES

- A. Once the choice of paving stones and the design have been finalized, we recommended that you start installing the pavers at a 90-degree angle. To do so, proceed as follows: measure a first horizontal line of 3' (1-m) and a second line of 4' (1.2 m) perpendicular to the first. Connect a third straight line of 5' (1.5 m) which will form a triangle. The result will be a perfect 90-degree angle. While installing the paving stones, walk on the installed pavers, and fill in gaps caused by the pipes with concrete sand.
- B. It is always recommended that you use more than two cubes at a time in order to maximize the color blend. Furthermore, you should proceed with the cubes from top to bottom.
- C. You may use a chalk line to mark the stones to be cut along the borders, using a guillotine or a concrete saw. When cutting paving stones, we recommend that you wear protective ear and eyewear.
- D. Once you finish installing the paving stones, you can then install Avignon, Belgik or Pietra curbstone on the granular base. To keep curbs in place, add mortar along the back to form a 45-degree angle between the ground and the curbstone or, when available, using the plastic retention system. In a vehicular traffic application, the mortar must be reinforced using steel rods.

05 FILLING IN JOINTS

- A. Spread out the polymer stabilizer sand on the paving stones and sweep in between joints in all directions.
- B. Pass a vibrating plate in all directions to allow sand to penetrate between the joints.
- C. Sweep once more and remove excess sand. Follow the instructions exactly as indicated on the polymer stabilizer sand packaging.

INSTALLATION GUIDE

INTERLOCKING CONCRETE PAVEMENT

VIBRATING PLATE ALERT!

Avoid scuffs on paver surfaces. Pavers with embossed surfaces (high and low points) are more susceptible to scuff marks from plate compactors. Techo-Bloc recommends the use of urethane mats between the plate and the paver surface when compacting. Techo-Bloc will not be held responsible for compaction scuffs or burns on pavers.

THICKNESS OF THE GRANULAR FOUNDATION¹

RESIDENTIAL PROJECTS	TYPE OF EXISTING SOIL	
	Clayey or Silty ²	Sandy or Gravelly
Driveways ³	8" to 14" (200 to 350 mm) Minimum	6" to 10" (150 to 250 mm) Minimum
Patios and Walkways ⁴	6" to 8" (150 to 200 mm) Minimum	4" to 6" (100 to 150 mm) Minimum

1. Data shown in this chart are provided as guidelines only. The range of values suggested depends particularly on existing soil conditions. The thicker the granular foundation, the greater the increase in stability of the whole structure.
2. In the case of unstable soils or ones particularly affected by the freeze-thaw cycles, a thicker foundation may be necessary. For soils with these conditions or for commercial, industrial, or institutional works, a geotechnical professional should be consulted.
3. For the province of Quebec, the typical range is:
 - For clayey or silty soils: 12" to 20"
 - For sandy or gravelly soils: 8" to 14"
4. For the province of Quebec, the typical range is:
 - For clayey or silty soils: 10" to 14"
 - For sandy or gravelly soils: 6" to 8"

INSTALLATION GUIDE

SEGMENTAL PERMEABLE PAVEMENT

INSTALLATION OUTLINE

01 DATA COLLECTION

- A. Determine the size, shape, and intended use of finished areas (i.e. residential driveway, secondary commercial parking, etc.).
- B. Classify sub-grade soils.
- C. Document all existing conditions (i.e. fixed points, existing grades, site contours, etc.).
- D. Document soil type, location, and elevation of below grade and overhead utilities both public and private.
- E. Ensure public utilities are marked through the use of a locating service.
- F. Determine the cross section design of the system based on soil type and application, showing proposed sub-grade and finished grade elevations and all geotextiles and drainage pipes needed for the construction.
- G. Establish the type, location, and elevation of relief structures if required (i.e. overflow pipe discharging to rain garden, etc.).
- H. Determine the curb or edge restraint type, elevation, and location.
- I. Choose a pattern appropriate to the application (traffic type and load).

02 EXCAVATION

- A. Before digging, contact the concerned companies if wires or pipes are located in the area to be excavated.
- B. Excavation depth is determined from the foundation thickness according to the project specifications (foundation thickness is determined by a qualified engineer based on structural and hydrological analyses).
- C. Although the slope of the sub-grade will depend on the drainage design and infiltration type, a minimum slope of 0.5% ($\frac{1}{4}$ " per ft, or 5 mm per meter) is recommended.
- D. The distance that the excavated area should extend beyond the area to be paved should be one to 1.5 times the thickness of the foundation. This extra space will ensure the stability of the pavers near the edge and the edge restraints.
- E. Level the bottom of the excavated area with a rake.

Compaction will reduce the permeability of the sub-grade and it should be executed according to the project specifications. If compaction is not specified, care should be taken to maintain undisturbed soil infiltration during excavation and construction. Stabilization of the sub-grade may be required with weak, continually saturated soils, or when subject to high traffic conditions. If the compaction or stabilization of sub-grade is necessary, reduced infiltration may require drainage pipes within the sub-base to conform to storm water drainage requirements.

03 GEOTEXTILE, IMPERMEABLE LINERS, AND DRAIN PIPES

- A. Use the geotextile specified and install it according to project specifications. The use of a woven geotextile with bi-axel strength that meets design criteria is recommended.
- B. Place the geotextile on the bottom and sides of the soil sub-grade. Eliminate wrinkles in the geotextile and ensure it is not damaged during construction.
- C. Overlap of geotextile should be a minimum of 2' (600 mm) in the direction of drainage. Overlapping should be "shingle" style with respect to any slope direction and base stone distribution direction. Keep properly tensioned, eliminate wrinkles, and avoid damaging fabric (no spikes).
- D. If impermeable liners are required, install them according to project specifications and manufacturer's instructions. Impermeable liners are used when full exfiltration from the reservoir (sub-base and base) into the underlying sub grade is not allowed (no infiltration design). Perforated drainage pipes are usually required in no infiltration and partial infiltration designs.
- E. If drainage pipes are required, install them according to project specifications. The aggregate cover over drainage pipes should be at least 12" (300 mm) to protect them from damage during sub-base or base compaction.

INSTALLATION GUIDE

SEGMENTAL PERMEABLE PAVEMENT

04 SUB-BASE

For residential pedestrian applications, the sub-base may not be required and then only ASTM No. 57 (CSA 5-28) aggregate base layer with a minimum thickness of 6" (150 mm) can be used (use a thicker base for additional water storage). Refer to Base (see below 06).

When traffic load, soil conditions, and climate require greater than 12" (300 mm) of base or volume requirements for detention are higher, a sub-base may be required. Use sub-base ASTM No. 2 or No. 3 (CSA 40-80) meeting the following requirements:

- 90% fractured symmetrical particles
 - Less than 5% passing the 200 sieve
 - Industry hardness tested
- A. Moisten, spread and compact the ASTM No. 2 (CSA 40-80) aggregate sub-base in minimum 6" (150 mm) lifts (without distorting or damaging the geotextile) according to the project specifications.
 - B. Make at least two passes in the vibratory mode followed by at least two passes in the static mode with a minimum 10 ton (9 metric ton) vibratory roller, until there is no visible movement of the aggregate. Alternately, a 13,500 lbf (60 kN) plate compactor can be used to compact the ASTM No. 2 (CSA 40-80) aggregate sub-base.
 - C. Do not allow the compactor to crush the aggregate.
 - D. Surface tolerance of the ASTM No. 2 (CSA 40-80) sub-base should be $\pm 2 \frac{1}{2}"$ (64 mm) over 10' (3 m).

05 EDGE RESTRAINT

- A. Install edge restraint according to project specifications.
- B. Depending on the design, the top of the edge restraint can be hidden or exposed.
- C. Install Avignon, Belgik or Pietra edge units. Cast-in-place concrete or precast concrete curbs should be considered in vehicular use applications (commercial/industrial driveways, parking lots or streets).
- D. Edge restraint may rest on an open-graded or dense-graded aggregate base.

06 BASE

- A. Moisten, spread and compact the ASTM No. 57 (CSA 5-28) aggregate base layer in one 4" (100 mm) thick lift.
- B. Make a minimum of two passes in vibratory mode followed by at least two in static mode with a minimum 10 ton (9 metric ton) vibratory roller, until there is no visible movement of the aggregate. Alternately, a 13,500 lbf (60 kN) plate compactor can be used to compact the ASTM No. 57 (CSA 5-28) aggregate base.
- C. Do not allow the compactor to crush the aggregate.
- D. Surface tolerance of the ASTM No. 57 (CSA 5-28) base should be $\pm 1"$ (25 mm) over 10' (3 m). Verify prior to setting bed installation.

07 BEDDING COURSE

- A. Moisten, spread and screed the ASTM No. 8 (CSA 2.5-10) aggregate bedding layer in one 2" (50 mm) thick lift.
- B. Surface tolerance of the ASTM No. 8 (CSA 2.5-10) bedding course should be $\pm 3 \frac{3}{8}"$ (10 mm) over 10' (3 m).
- C. Construction equipment and pedestrian traffic on the screeded bedding course should not be permitted.

08 PAVER

- A. Pavers should be placed in the pattern shown on the drawings. Lay units hand tight to designated laying patterns. Units have lugs to maintain consistent joint width.
- B. In sloped conditions, it is preferable to start laying from the bottom in an uphill direction.
- C. The minimum slope recommended for permeable pavement surface is 1%.
- D. Hydra pavers can be installed with a mechanical tool to expedite installation.
- E. When subject to vehicular traffic, cut units should not be smaller than $\frac{1}{3}$ of a whole paver. When using cut pieces, maintain joint.
- F. In vehicular applications, pattern strength will increase if laying pattern is perpendicular to traffic flow.

INSTALLATION GUIDE

SEGMENTAL PERMEABLE PAVEMENT

09 JOINT FILL

- A. Fill the paver joint openings with ASTM No. 8 (CSA 2.5-10) aggregate (or No. 89, No. 9 depending on joint width). Sweep stone to fill joints. Surface must be swept clean prior to compaction.
- B. Compact with a minimum 5,000 lbf (22 kN) plate compactor (two passes minimum). The installation of a neoprene pad is recommended to protect the texture of the paving units.
- C. Do not compact within 6' (1.8 m) of unrestrained edges of the pavers.
- D. Apply additional aggregate to fill the joint openings if needed and compact.
- E. Surface tolerance of compacted pavers should be $\pm \frac{3}{8}"$ (10 mm) over 10' (3 m).

QUANTITY CHART FOR PERMEABLE JOINTS

Approximate clean stone quantity in kg (lb) to cover an area of 1 m² (1 pi²) to fill between joints.
It is recommended to always start with a small area.

PRODUCTS	JOINT FILL MATERIAL	(lbs/sq. ft)	(kg/sq. m)
Antika	ASTM No. 8 (CSA 2.5 - 10) ($\frac{1}{4}"$)	1.9	9.3
Aquastorm	ASTM No. 8 (CSA 2.5 - 10) ($\frac{1}{4}"$)	12.2	59.5
Blu 60 mm	ASTM No. 9 (CSA 2.5 - 5) ($\frac{1}{8}"$)	0.6	3.0
Blu 60 mm (6x13)	ASTM No. 9 (CSA 2.5 - 5) ($\frac{1}{8}"$)	0.9	4.2
Blu 80 mm	ASTM No. 9 (CSA 2.5 - 5) ($\frac{1}{8}"$)	0.8	4.0
Blu 80 mm (6x13)	ASTM No. 9 (CSA 2.5 - 5) ($\frac{1}{8}"$)	1.2	5.7
Hydra	ASTM No. 8 (CSA 2.5 - 10) ($\frac{1}{4}"$)	2.9	14.4
Mika	ASTM No. 8 (CSA 2.5 - 10) ($\frac{1}{4}"$)	2.5	12.2
Mista random	ASTM No. 9 (CSA 2.5 - 5) ($\frac{1}{8}"$)	1.0	5.0
Pure	ASTM No. 9 (CSA 2.5 - 5) ($\frac{1}{8}"$)	1.4	7.0
Travertina Raw	ASTM No. 8 (CSA 2.5 - 10) ($\frac{1}{4}"$)	2.5	12.2
Valet	ASTM No. 9 (CSA 2.5 - 5) ($\frac{1}{8}"$)	1.3	6.2
Villagio	ASTM No. 8 (CSA 2.5 - 10) ($\frac{1}{4}"$)	2.1	10.2

Note: Gator Aqua Rock permeable stone (bagged) can be used to meet the ASTM No. 9 gradation.

10 POST INSTALLATION PROTECTION

Prevent contamination of the porous (permeable) pavement system from fine aggregates and debris by maintaining erosion and sedimentation (E&S) measures at the perimeter.

AQUASTORM

DESCRIPTION: Paver **TEXTURE:** Smooth

PALLET OVERVIEW

Aqua Storm paver meet and exceeds the requirements of ASTM C1319 for Concrete Grid Paving Units.

NOTES

See page 62 to 64 for more technical information. When used in a permeable pavement application, see page 33 and 101 for more technical information.

See page 30 for more information about applications.

JOINT WIDTH: 1 5/8" (41 mm)
% OF SURFACE OPENING: 38 %
INFILTRATION RATE: 2 395 in./hr
 (60 842 mm/hr)

WINTER CONDITIONS

De-icing salts should never be used on grass as salt will damage it. The snowblower blade should be set to leave a 3/4 to 1 1/2 in. (2 to 4 cm) tamped snow cover to protect the grass from extreme cold and prevent it from being torn off during snow removal.

PRESCOTT

DESCRIPTION: Fire pit **TEXTURE:** Natural stone

NOTES

Sold as a kit not pre-assembled.
Piedimonte caps included.

Techo-Bloc is not responsible for any damages to the firepit if it is not installed with a sleeve or accessory kit. The firepit is not designed for large fires. Fire should be contained at least 6" away from the firepit wall blocks. Overheating could lead to heat damage to the firepit components.

*For an authentic look, each color option is composed of a variety of darker & lighter tones. Natural ingredients such as granite are present within the recipe to allow for a range in tones, veining and textures from one stone to another.

See 119 for more technical information.

Specifications per pallet	Imperial	Metric
Approx. Weight	2 813 lbs	1276 kg
Height	18 in	457 mm
Depth	51 ¾ in	1 314 mm
Length	51 ¾ in	1 314 mm

WALLS

WALLS, PILLARS & PLANTERS

PHYSICAL AND GEOMETRICAL CHARACTERISTICS

CHARACTERISTICS		ASTM C 1372	TECHO-BLOC
Compressive strength		3 000 psi [21 MPa] min.	5 050 psi [35 MPa] min.
Water absorption		13 lb/ft ³ [208 kg/m ³] max	9 lb/ft ³ [144 kg/m ³] max.
Freeze-thaw durability		Mass loss (max.): 1% at 100 cycles, or Mass loss (max.): 1.5% at 150 cycles	Mass loss (max.): 1% at 100 cycles, or Mass loss (max.): 1.5% at 150 cycles
Dimension tolerance ¹	length	± 1/8" [3.2 mm]	± 1/8" [3.2 mm]
	width	± 1/8" [3.2 mm]	± 1/8" [3.2 mm]
	height	± 1/8" [3.2 mm]	± 1/8" [3.2 mm]

Notes : 1. The dimension tolerance is not applicable to split facings or other architectural finish.

2. The dimensional tolerance for Stonedge wet cast retaining wall units is: ± 3/16" (5 mm) for height and ± 1/2" (13 mm) for length and width.

3. During the installation, the level between adjacent wall units will vary (usually more than for a dry cast wall unit) in order to obtain a more realistic appearance of a natural stone wall. Stonedge collection of wet cast wall units include, but are not limited to, the following: Borealis, Prescott, Röcka and Travertina Raw wall units.

⁽¹⁾ For 0° degree (vertical) batter retaining walls, it is recommended a slight positive batter achieved by tilting the top surface of the leveling pad from front to back. This will accommodate forward rotation of the wall during or after installation.

⁽²⁾ Alternatively to tilting the leveling pad, an offset of 1/4" (6 mm) min. per row could be used instead.

⁽³⁾ These typical height ranges may require geogrid. Contact our Technical Support for assistance.

⁽⁴⁾ Available Corner/Pillar units, sold separately.

⁽⁵⁾ Installation drawing available.

⁽⁶⁾ Not pre-assembled kits available.

⁽⁷⁾ Pre-assembled kits available.

⁽⁸⁾ UL-127 & ULC-S610 Compliant

⁽⁹⁾ Mechanical installation required.

INSTALLATION GUIDE

GRAVITY RETAINING WALL CHARACTERISTICS - RESIDENTIAL

The chart below provides general information for residential garden walls based on optimal conditions (see Note 2 below). Contact our Technical Service department if your project requires a higher wall, conditions are not optimal or for commercial applications.

- [1] The total height does not include the cap thickness. The total height measurement refers to the vertical distance between the top of the leveling pad (aggregate base) and the top of the uppermost course.
- [2] The optimal conditions assumed for the development of this chart are the following: (i) The retained soil type is granular with an internal friction angle of 36 degrees; (ii) There is no presence of load applied or slope above the wall; and (iii) An adequate drainage system is provided to the wall system.
- [3] The minimum radius is measured from the center of the circle to the outer face of the wall. It corresponds to the lowest course in an internal curve and to the uppermost course in an external curve.

- [1] Vertical Retaining walls are constructed without any face inclination or setback.
- [2] Heights do not include cap thickness.
- [3] - Total Height is the vertical distance measured from the top of the footing (aggregate base) to the top of the uppermost course.
- Exposed Height is the vertical distance measured from the finished grade at the bottom of the wall to the top of the uppermost course. It does not include the wall depth below grade (embedment).
- [4] Freestanding Minimum Wall radius based on the shortest tapered unit.
- [5] The maximum height does not necessarily correspond to the amount of blocks in a pallet.
- [6] Pillar units sold separately.

PRELIMINARY DESIGN ASSISTANCE - REQUEST FORM FOR DESIGN PROFESSIONALS, ENGINEERS AND CONTRACTORS

Techo-Bloc can help you in your preliminary design of retaining walls. However, preliminary design should only be used to assess the suitability of a wall system to a specific project or for estimating budget costs. For final construction designs, please contact a qualified engineer in your area.

INSTALLATION GUIDE

RETAINING WALLS

Installation outline

01 EXCAVATION

- Check the location of existing structures and utilities before starting the excavation.
- Dig out a trench. Its depth should be calculated according to the thickness of the leveling pad and the burial depth of the wall.
- Plan for a thickness of at least 6" (150 mm) for the leveling pad and consider that at least 10% of the height of the wall should be buried in the ground. In all cases, the wall must be buried no less than 6" (150 mm) deep.
- In determining the width of the trench, allow for a space of at least 6" (150 mm) at the front of the wall and 12" (300 mm) at the back. Compact and level the excavation base.

FOR GEOGRID REINFORCED RETAINING WALLS

The excavation must also take into account the length of geogrid.

02 FOUNDATION

- Cover the base and back of the trench with a geotextile. Extend the geotextile towards the back of the excavation and eventually above the drainage fill once it is in place close to the top of the wall.
- Next, spread the 0-3/4" (0-20 mm) stone in the trench and compact using a vibratory plate or jumping jack, ensuring that the surface is level. The compacted leveling pad must be at least 6" (150 mm) thick.

NOTE FOR STEPPED FOUNDATION

A wall built on an incline requires stepped foundations. For steep inclines, several steps may be required. Construction should start at the lowest level. Each of the steps must follow a level horizontal path and the vertical distance separating the successive steps must equal the height of a block.

INSTALLATION GUIDE

RETAINING WALLS

03 BUILDING THE FIRST COURSE

- Using blocks of the same height, place the first course on the compacted leveling pad according to the predetermined layout. Check the alignment and leveling in all directions and make sure that all the blocks are in full contact with the leveling pad and properly supported.
- Place the exposed surfaces of the blocks side by side. There must be no space between the exposed faces of adjacent blocks.
- At the back of the wall and on the compacted leveling pad, lay a 4" (100 mm) diameter perforated drain. Connect this drain to the existing drainage system so that it clears the water accumulated behind the wall.

04 BACKFILLING

Backfill at the rear of the wall and the space between the back of the blocks with $\frac{3}{4}$ " (20 mm) clean stone. Use a minimum of 12" (300 mm) of clean stone behind the wall unit, but not less than a minimum of 24" (600 mm) from the face of the wall. Level and settle the clean stone. Any cavities in the blocks must also be filled with clean stone.

05 SUBSEQUENT COURSES

- Clean the top of each block before laying the next course. Depending on the type of block, install the connectors on the extremity of each block.
- Lay the subsequent courses, backfilling at the rear of the wall every 8" (200 mm maximum, using the same method outlined in step 4.
- Make sure the subsequent courses are laid such that the vertical seams are aligned with the blocks below.

FOR GEOGRID REINFORCED RETAINING WALLS

Where geogrids are to be used, cover the clean stone with a geotextile. Select the geogrid according to the type, level and appropriate length. Position the geogrid according to the main reinforcement direction perpendicular to the wall. The geogrid must be continuous all along its embedment length. Splicing of the geogrid in the main reinforcement direction is not permitted. The geogrid must be installed horizontally over the compacted backfill and the previous course of blocks. Fix the connectors on the geogrid and lay the next course of blocks. Pull on the back of the geogrid and maintain its tension by stakes or pins. Repeat with a new section of geotextile and place the reinforced backfill directly behind the drainage fill. Fill and compact up to the level of the blocks.

Heavy equipment must not be used less than 3' (1-m) behind the blocks. Construction equipment must not drive directly over the geogrid. Repeat the various installation steps.

06 FINISHING

Position the course of coping stones (if applicable) or the final course of blocks to complete the wall. The coping stones or final course of blocks must be fixed to the subjacent blocks using concrete adhesive and there must be no space between the blocks.

INSTALLATION GUIDE

RETAINING WALLS

CAP UNIT – DRIP GROOVE

While optional, drip groove applied to the underside of wall cap units is beneficial to reduce the potential of leaving water marks and stains on the wall surface (retaining or freestanding wall). Rain water will run underneath the cap unit, reach the drip groove and fall directly to the ground, instead of continuing to run underneath the cap and down the wall.

INSTALLATION GUIDE

RETAINING WALLS

Anchoring system | Connectors in curved wall application

HDPE Horizontal Key

When creating internal curves and the HDPE horizontal keys are in the back groove, two connectors must be installed on each block as illustrated.

HDPE Vertical Key

When creating curves using HDPE vertical keys adjust placement in field to achieve desired curve.

Precast concrete "U" Connector

When creating internal curves with the precast concrete "U" connector, place one connector on top center of each lower course block and adjust placement in field to achieve desired curve.

Precast concrete "Z" Connector

When creating internal curves with the precast concrete "Z" connector, place one connector on top center of each lower course block and adjust placement in field to achieve desired curve.

Anchoring system | Connectors in geogrid reinforced wall application

HDPE Horizontal Key

When installing a geogrid, using HDPE horizontal keys, it must be placed above the connectors. The connectors will therefore be placed before the geogrid. After positioning the geogrid, move the block (from the above course) forward until it touches the connectors and ensures that the system is locked.

INSTALLATION GUIDE

RETAINING WALLS

HDPE Vertical Key

When installing geogrid, using HDPE vertical keys, it must be placed immediately above the lower course block. The connectors will be inserted in the vertical slots of the upper course blocks. Ensure that pin all ways settles into the receiving slot of the lower course block and not on the geogrid. Once the pin settles, move forward the upper block until it touches the connectors and ensures that the system is locked.

Internal corner

When building a wall with an internal corner, it is recommended to start constructing the wall at the corner and build out from this point in both directions. To form the corner, use the longer modules as illustrated. Build wall B by extending it out from wall A so the end of wall B is aligned with the back of wall A. For subsequent courses, simply alternate the extension of walls A and B.

When using geogrid, it must be extended beyond the internal corner by at least 25% of the total height of the wall. Alternate the extension of the geogrid for subsequent layers (as illustrated in grey)

INSTALLATION GUIDE

RETAINING WALLS

External corner

For walls with an external corner, start building the wall from the corner and continue from this point in both directions. For each subsequent course, alternate the direction of the corner unit and secure the corner unit to the block below using concrete adhesive.

When overlapping two geogrids in the same layer (as illustrated by shaded area) allow at least 3" (75 mm) of backfill in between the overlapping section

Oblique corner

The longer modules should be used to build an oblique external corner. Alternatively, corner can be replaced by a curve.

Note: Cut face finish may differ from original face finish

Note: Adjust placement in field to achieve desired angle

INSTALLATION GUIDE

RETAINING WALLS

Internal curve

The Techo-Bloc retaining wall system allows walls to be built with internal and external curves. These curves can be achieved without cutting the blocks. You will need to angle the curves according to the minimum radius specified by Techo-Bloc.

When building a wall with an internal curve, it is recommended to start building the wall at the center of the curve and place blocks alternately to the left and right of the central block. If the wall to be constructed requires a setback (inclined wall), each course should be offset to the back and the curve will then become bigger. The minimum radius is therefore that of the first course.

When using geogrid, it must cover 100% of the surface around the curve. To do this, additional layers of geogrid are placed on the next course of blocks to fill voids created from previous course (as illustrated in green).

INSTALLATION GUIDE

RETAINING WALLS

External curve

When building a wall with an external curve, it is recommended to start building the wall at the center of the curve and place blocks alternately to the left and right of the central block. Unlike internal curves, the external curve gets smaller as courses are added. The minimum radius is therefore that of the last course.

When using geogrid, it must cover 100% of the surface around the curve. To achieve this, additional layers of geogrid are placed on the same course of blocks to fill voids (as illustrated in green). In this case, we recommend at least 3" (75 mm) of backfill in between the overlapping sections.

INSTALLATION GUIDE

RETAINING WALLS

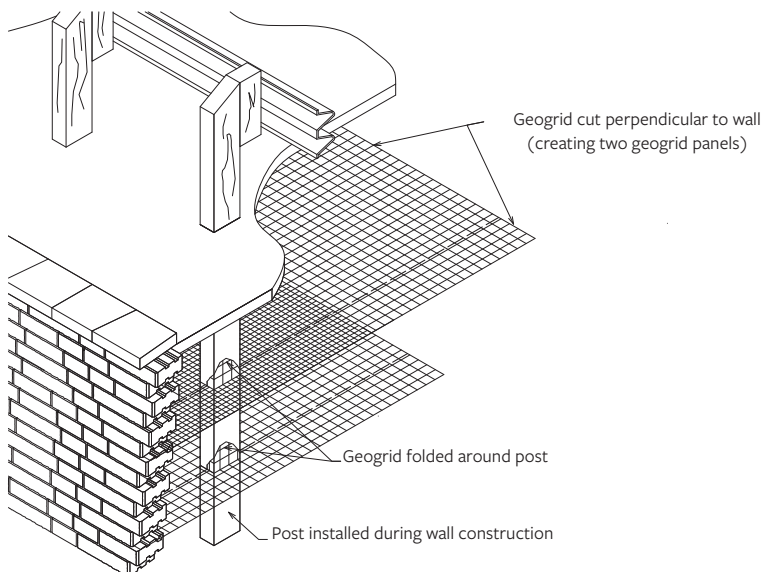

Fencing

Fencing can be erected behind the blocks. Fence posts must be placed in formwork tubes positioned during construction of the wall and then filled with concrete. The geogrid may be cut to accommodate installation of the tubes. Cut the geogrid in alignment with the center of the formwork tube and perpendicular to the wall, thus creating two geogrid panels. Connect the two geogrid panels at the front and back of the formwork tube and bend the geogrid to fit around the formwork.

Guard Rail

As with fencing, a guardrail can be incorporated behind the blocks. The guardrail posts must be installed during construction of the wall. The geogrid is cut perpendicular to the wall and in alignment with the center of the post, thus creating two geogrid panels. These two panels are connected at the front and back of the post. The geogrid can be bent to fit around the post.

INSTALLATION GUIDE

RETAINING WALLS

Tiered Wall

Although tiered walls look appealing, it is important to take into account the additional load the upper wall applies on the lower wall. If the distance between the walls is at least twice the height of the lower wall, the walls are generally independent of each other. However, if this distance is less the lower wall must be built to take account of the load of the upper wall and geogrids may be required.

INSTALLATION GUIDE

FREESTANDING WALLS

Installation Outline

01 EXCAVATION

- A. Check the location of existing structures and utilities before starting the excavation.
- B. Dig out a trench. The trench should be 12" wider than the block width (6" (150mm) at the front and at the back of the wall).
- C. The trench should be a minimum 12" (300mm) deep. This depth will provide 6" (150mm) for the compacted base and a minimum 6" (150mm) free-standing wall embedment.
- D. In areas where unstable soils or one particularly affected by freeze-thaw cycles, a thicker compacted base may be necessary.
- E. The foundation soil should be checked to make sure it is firm, level and capable of supporting the freestanding wall.

02 FOUNDATION

- A. Cover the excavated area with a geotextile. Create a leveling pad of compacted aggregate base material. The pad should be composed of 0-3/4" (0-20 mm) crushed stone with a minimum thickness of 6" (150 mm).

NOTE FOR STEPPED FOUNDATION

A wall built on an incline requires stepped foundations. For steep inclines, several steps may be required. Construction should start at the lowest level. Each of the steps must follow a level horizontal path and the vertical distance separating the successive steps must equal the height of a block.

03 BUILDING THE FIRST COURSE

- A. Using blocks of the same height, place the first course on the compacted leveling pad according to the predetermined layout. Check the alignment and leveling in all directions and make sure that all the blocks are in full contact with the leveling pad and properly supported.
- B. Place the blocks side by side. There must be no space between adjacent blocks. For alignment of straight walls, use a string line aligned on the connector's slots of applicable units, or back of the block of full solid units.
- C. For tapered units, alternate front and back faces to obtain straight walls.

INSTALLATION GUIDE

FREESTANDING WALLS

Installation Outline

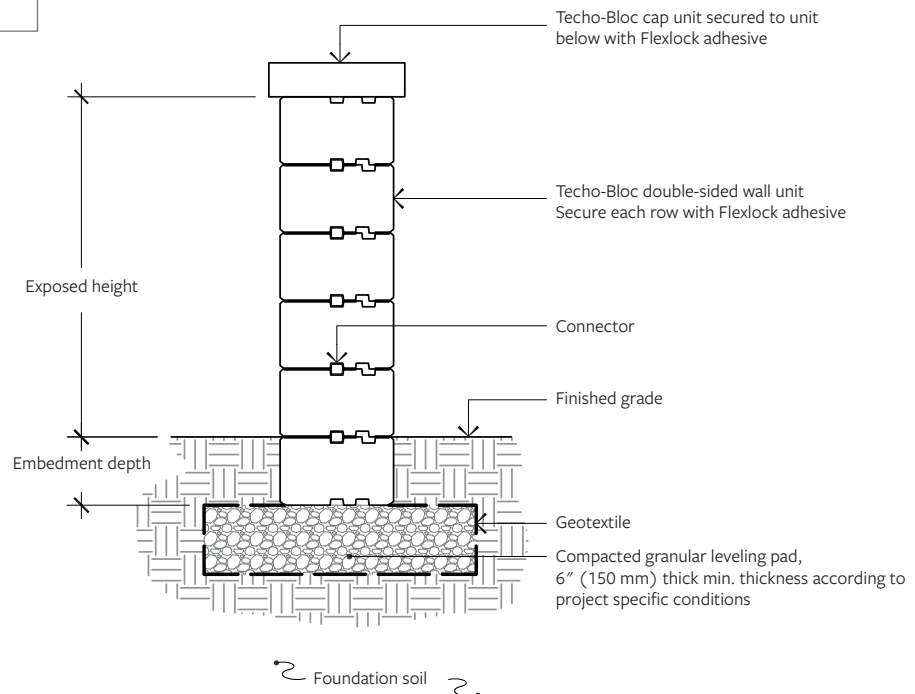

04 SUBSEQUENT COURSES

- A. Clean the top of each block before laying the next course. Depending on the type of block, install the connectors if available on each block.
- B. Stagger joints from one row to the next.
- C. Glue all modules at each row with a concrete adhesive for securing.
- D. All Free-standing walls must be installed in vertical position.
- E. Any cavities in the blocks must be filled with $\frac{3}{4}$ " (20 mm) clean stone.
- F. Continue building to the desired and permissible height.

05 FINISHING

- A. Position the cap units (if applicable) or the final course of blocks to complete the wall. The cap units (if applicable) or final course of blocks must be fixed to the subjacent blocks using concrete adhesive and there must be no space between the blocks.

INSTALLATION GUIDE

PILLARS

General Note

It is important to adequately glue each row with a concrete adhesive in order to obtain a stable pillar.

If you are planning to install a light on top of the pillar, make sure you run the electrical wires prior to installing the blocks.

If you are planning to build a pillar with a planter, make sure to install a geotextile membrane inside the pillar before filling the cavity with planting soil.

Installation Outline

01 EXCAVATION

- A. Check the location of existing structures and utilities before starting the excavation.
- B. Excavate an area that is 12" (300 mm) wider than the pillar (6" [150 mm] at each side of the pillar).
- C. The excavated area should be a minimum 12" (300mm) deep. This depth will provide 6" (150mm) for the compacted base and a minimum 6" (150mm) of embedment.
- D. In areas where unstable soils or one particularly affected by freeze-thaw cycles, a thicker compacted base may be necessary.
- E. The foundation soil should be checked to make sure it is firm, level and capable of supporting the pillar.

02 FOUNDATION

- A. Cover the excavated area with a geotextile. Create a leveling pad of compacted granular base material. The pad should be composed of 0-¾" (0-20 mm) crushed stone with a minimum thickness of 6" (150 mm).

03 BUILDING THE FIRST COURSE

- A. Using the corresponding pillar or corner units, place the first course on the compacted base according to the predetermined layout. Check the alignment and leveling in all directions and make sure that all the blocks are in full contact with the base and properly supported.

INSTALLATION GUIDE

PILLARS

Installation outline

04 SUBSEQUENT COURSES

- Clean the top of each block before laying the next course.
- Stagger joints from one row to the next.
- Glue all modules at each row with a concrete adhesive for securing.
- Backfill the excavated area surrounding the pillar.
- Continue building to desired and permissible height.

05 CROWNING

- Crown the pillar using Techo-Bloc Pillar cap units and securing to blocks underneath with a concrete adhesive.

BOREALIS WALL

DESCRIPTION: Wall **TEXTURE:** Wood

PALLET OVERVIEW

A

NOTES

*For an authentic look, each color option is composed of a variety of darker & lighter tones. Natural ingredients such as granite are present within the recipe to allow for a range in tones, veining and textures from one stone to another.

The dimensional tolerance for Stonedge wet cast retaining wall units is: $\pm \frac{3}{16}$ " (5 mm) for height and $\pm \frac{1}{2}$ " (13 mm) for length and width. During the installation, the level between adjacent wall units will vary (usually more than for a dry cast wall unit) in order to obtain a more realistic appearance of a natural stone wall.

See page 135 to 156 for more technical information.

VISIT WWW.TECHO-BLOC.COM FOR COMPLETE DESIGN CHART DOCUMENT
(USA AND CANADA VERSIONS)

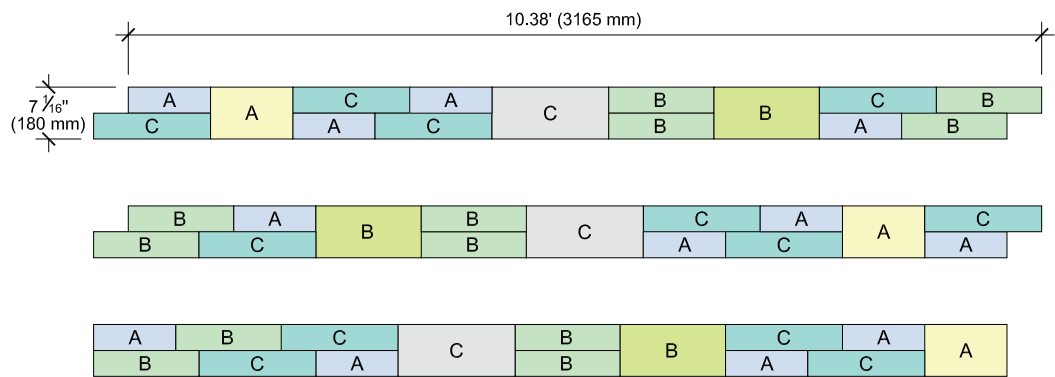

1. The information contained in the design charts is supplied for information purposes only and as such should only be used for preliminary designs.
2. The height (H) of the wall is the total height from the leveling pad to the top of the wall not including the thickness of the cap.
3. Soil parameters: reinforced soil ($\phi = 34^\circ$, $\gamma = 120$ pcf); retained soil ($\phi = 34^\circ$, $\gamma = 120$ pcf); foundation soil ($\phi = 34^\circ$, $\gamma = 120$ pcf)
4. A qualified engineer should be consulted for the final design to be used for construction.
5. The foundation soil must be able to support the wall system. The bearing capacity of the foundation soil, settlement, and global stability must be verified and validated by a qualified geotechnical engineer.
6. The seismic analysis is not included.
7. The design charts do not apply to tiered walls.
8. The charts assume that the walls are constructed in accordance with Techo-Bloc specifications, good construction practice and an adequate drainage system.
9. The geogrid layout has been optimized to satisfy the design requirements of the NCMA's Design Manual for Segmental Retaining Walls, 3rd Edition.
10. The minimum burial depth must be 6 in (150 mm) or 10% of the exposed height, whichever is greater.
11. Engineering judgement should be used when interpolating between heights.
12. Techo-Bloc and its predecessors, successors, beneficiaries, employees, associates, administrators and insurers accepts no liability for the incorrect use of information contained in the design charts.
13. For further information, please contact our technical service department.

INSTALLATION GUIDE

RETAINING WALLS - MINI-CRETA 3" AND 6"

1-Row Pattern | Laying Patterns

The 1-row pattern provides five different combinations. Each combination is 8.9' (2.7 m) long and 5 7/8" (150 mm) high. **This pattern can be used to lay the last course of units or when the other models cannot be used.**

NUMBER OF BLOCKS REQUIRED	MODULE		
MINI-CRETA	A	B OR B*	C OR D
67% of the surface - Mini-Creta 3"	4	4	4
33% of the surface - Mini-Creta 6"	1	1	1

INSTALLATION GUIDE

RETAINING WALLS - MINI-CRETA 3" AND 6"

3-Row Pattern | Laying Patterns

The 3-row pattern provides four different combinations. Each combination is 8.9' (2.7 m) long and 17 11/16" (450 mm) high. This pattern gives a leveled surface every 17 11/16" (450 mm), which is the recommended spacing between two layers of geogrid in a Mini-Creta wall. **This pattern is recommended when using geogrid.**

NUMBER OF BLOCKS REQUIRED

MODULE

MINI-CRETA	A	B OR B*	C OR D
78% of the surface - Mini-Creta 3"	14	14	14
22% of the surface - Mini-Creta 6"	2	2	2

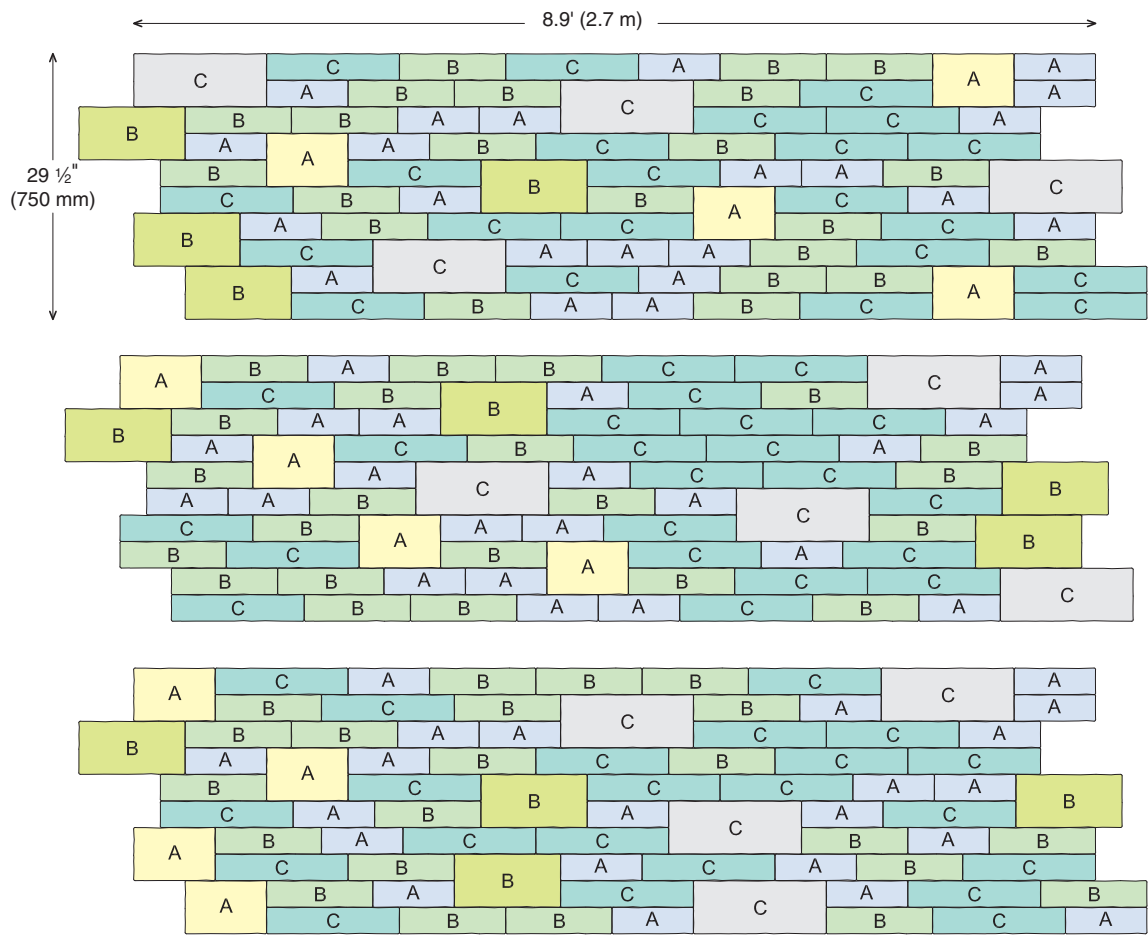

INSTALLATION GUIDE

RETAINING WALLS - MINI-CRETA 3" AND 6"

5-Row Pattern | Laying Patterns

The 5-row pattern provides three different combinations. Each combination is 8.9' (2.7 m) long and 29 1/2" (750 mm) high. **This pattern should only be used when geogrid is not required.**

NUMBER OF BLOCKS REQUIRED	MODULE		
	A	B OR B*	C OR D

6" (150 mm) THICK MIN. AS PER SITE CONDITIONS
- J. NATURAL SOIL OR COMPACTED BACKFILL
- K. GEOTEXTILE

QUANTITY OF MATERIALS REQUIRED

- York Counter top 24" × 36" × 2 1/4": **4**
- Mini-Creta 3" unit: **32 A**, **24 B**, **8 B***, **14 C**, **10 D**
- Mini-Creta 6" unit: **6 A**, **6 B**, **2 B***, **6 C**, **6 D**
- Pillar 24" × 6" (Mini-Creta) unit: **28**

NOTE: Appliances and utilities may vary for each project and are not shown on this drawing. This drawing is shown for inspiration only and surplus or shortage of materials may result. It is the user's responsibility to verify for the quantity of materials required. Secure the blocks using a heat resistant concrete adhesive. The installer must ensure that the installation and use of the grill island comply with local regulations and code requirements. Concrete pillars extending to frost line may be required as per local code. Check your local building code before installing.

 CUT ON FIELD

PRESCOTT 2.25"

DESCRIPTION: Wall double-sided **TEXTURE:** Natural stone

PALLET OVERVIEW

COMPATIBLE CAPS

See page 140 for product compatibility.

NOTES

When building a double-sided wall one pallet will cover an average of 25.23 ft².

*For an authentic look, each color option is composed of a variety of darker & lighter tones. Natural ingredients such as granite are present within the recipe to allow for a range in tones, veining and textures from one stone to another.

The dimensional tolerance for Stonedge wet cast retaining wall units is: $\pm \frac{3}{16}$ " (5 mm) for height and $\pm \frac{1}{2}$ " (13 mm) for length and width. During the installation, the level between adjacent wall units will vary (usually more than for a dry cast wall unit) in order to obtain a more realistic appearance of a natural stone wall.

See page 135 to 156 for more technical information.

PRESCOTT RETAINING WALL – LAYING PATTERNS

The different modules of the Prescott retaining wall allow the installation of different block combinations. Eight combinations are shown as an example. Each combination is 24" (610 mm) long and 6 3/4" (171 mm) high.

The wall installation will be facilitated if the height of the wall is calculated in multiples of 6 3/4" and the length in multiples of 24".

Percentage of blocks required
Prescott 2.25": 33 % of the surface
Prescott 4.5": 67 % of the surface

VISIT WWW.TECHO-BLOC.COM FOR COMPLETE DESIGN CHART DOCUMENT
(USA AND CANADA VERSIONS)

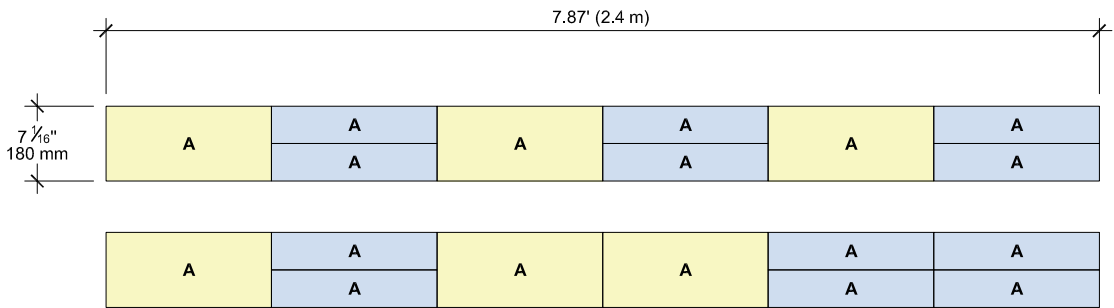

1. The information contained in the design charts is supplied for information purposes only and as such should only be used for preliminary designs.
2. The height (H) of the wall is the total height from the leveling pad to the top of the wall not including the thickness of the cap.
3. Soil parameters: reinforced soil ($\phi = 34^\circ$, $\gamma = 120$ pcf); retained soil ($\phi = 34^\circ$, $\gamma = 120$ pcf); foundation soil ($\phi = 34^\circ$, $\gamma = 120$ pcf)
4. A qualified engineer should be consulted for the final design to be used for construction.
5. The foundation soil must be able to support the wall system. The bearing capacity of the foundation soil, settlement, and global stability must be verified and validated by a qualified geotechnical engineer.
6. The seismic analysis is not included.
7. The design charts do not apply to tiered walls.
8. The charts assume that the walls are constructed in accordance with Techo-Bloc specifications, good construction practice and an adequate drainage system.
9. The geogrid layout has been optimized to satisfy the design requirements of the NCMA's Design Manual for Segmental Retaining Walls, 3rd Edition.
10. The minimum burial depth must be 6 in (150 mm) or 10% of the exposed height, whichever is greater.
11. Engineering judgement should be used when interpolating between heights.
12. Techo-Bloc and its predecessors, successors, beneficiaries, employees, associates, administrators and insurers accepts no liability for the incorrect use of information contained in the design charts.
13. For further information, please contact our technical service department.

INSTALLATION GUIDE

RETAINING WALLS - RAFFINATO 90 mm & 180 mm

1-Row Pattern | Laying Patterns

The single row model shows two examples combination. Each combination is 2.4 m (7.87") long and 180 mm (7 1/16") high. **This model can be used for installing the last row of modules or where other models cannot be used.**

NUMBER OF BLOCKS REQUIRED MODULE

RAFFINATO	A

RÖCKA

DESCRIPTION: Wall & edge double-sided **TEXTURE:** Natural stone (Fossil stone)

PALLET OVERVIEW - ROW 1

PALLET OVERVIEW - ROW 2

PALLET OVERVIEW - ROW 3

NOTES

*For an authentic look, each color option is composed of a variety of darker & lighter tones. Natural ingredients such as granite are present within the recipe to allow for a range in tones, veining and textures from one stone to another.

See page 135 to 156 for more technical information.

The dimensional tolerance for Stonedge wet cast retaining wall units is: $\pm \frac{3}{16}$ " (5 mm) for height and $\pm \frac{1}{2}$ " (13 mm) for length and width. During the installation, the level between adjacent wall units will vary (usually more than for a dry cast wall unit) in order to obtain a more realistic appearance of a natural stone wall.

Specifications per pallet	Imperial	Metric
Cubing	19.88 ft²	1.85 m ²
Approx. Weight	1 860 lbs	844 kg

SEMMA

DESCRIPTION: Wall double-sided **TEXTURE:** Split Face

PALLET OVERVIEW

COMPATIBLE CAPS

See page 140 for product compatibility.

NOTES

When building a double-sided wall one pallet will cover an average of 21.74 ft².

The corner units for the Semma block should be glued with a concrete adhesive.

The corner unit can be used as a right or left corner unit and as a regular unit.
Metric measures are approximate.

See page 135 to 156 for more technical information.

VISIT WWW.TECHO-BLOC.COM FOR COMPLETE DESIGN CHART DOCUMENT
(USA AND CANADA VERSIONS)

1. The information contained in the design charts is supplied for information purposes only and as such should only be used for preliminary designs.
2. The height (H) of the wall is the total height from the leveling pad to the top of the wall not including the thickness of the cap.
3. Soil parameters: reinforced soil ($\phi = 34^\circ$, $\gamma = 120$ pcf); retained soil ($\phi = 34^\circ$, $\gamma = 120$ pcf); foundation soil ($\phi=34^\circ$, $\gamma = 120$ pcf)
4. A qualified engineer should be consulted for the final design to be used for construction.
5. The foundation soil must be able to support the wall system. The bearing capacity of the foundation soil, settlement, and global stability must be verified and validated by a qualified geotechnical engineer.
6. The seismic analysis is not included.
7. The design charts do not apply to tiered walls.
8. The charts assume that the walls are constructed in accordance with Techo-Bloc specifications, good construction practice and an adequate drainage system.
9. The geogrid layout has been optimized to satisfy the design requirements of the NCMA's Design Manual for Segmental Retaining Walls, 3rd Edition.
10. The minimum burial depth must be 6 in (150 mm) or 10% of the exposed height, whichever is greater.
11. Engineering judgement should be used when interpolating between heights.
12. Techo-Bloc and its predecessors, successors, beneficiaries, employees, associates, administrators and insurers accepts no liability for the incorrect use of information contained in the design charts.
13. For further information, please contact our technical service department.

TRAVERTINA RAW

DESCRIPTION: Double-sided wall **TEXTURE:** Brushed Travertine

PALLET OVERVIEW

COMPATIBLE CAPS

See page 140 for product compatibility.

NOTES

The dimensional tolerance for Stonedge wet cast retaining wall units is: $\pm \frac{3}{16}$ " (5 mm) for height and $\pm \frac{1}{2}$ " (13 mm) for length and width. During the installation, the level between adjacent wall units will vary (usually more than for a dry cast wall unit) in order to obtain a more realistic appearance of a natural stone wall.

See page 135 to 156 for more technical information.

RÖCKA

DESCRIPTION: Steps **TEXTURE:** Natural stone (Fossil stone)

PALLET OVERVIEW - 48"

PALLET OVERVIEW - 60"

NOTES

Röcka 48" is a double-sided step. Each side has slight natural texture differences. Please take that into consideration when installing them side by side. We recommend keeping the same texture together.

Please note that there is a slight vertical angle on the front and back faces of the step $\frac{3}{8}$ ", from the bottom to the top of the step.

To achieve a natural appearance, product dimensions can vary $\pm\frac{3}{16}$ " (5 mm) for height and $\pm\frac{1}{2}$ " (13 mm) for length and width.

*For an authentic look, each color option is composed of a variety of darker & lighter tones. Natural ingredients such as granite are present within the recipe to allow for a range in tones, veining and textures from one stone to another.

ACCESSORIES

ADHESIVES, BASE & EDGE, BUZON PEDESTALS, CLEANERS &
ACCESSORIES, GEOGRID, GEOTEXTILE, JOINT STABILIZERS, SEALERS

ADHESIVES

GATOR ULTRA PERFORMANCE CONCRETE ADHESIVE

Gator Ultra Low VOC is one of the strongest polyurethane adhesives on the market. It strongly adheres to concrete pavers, stones, retaining wall, masonry units & bricks. It is especially formulated for overlays, pool copings, steps & wall caps. Gator Ultra Low VOC Polyurethane Adhesive is designed to provide a permanent bond in 24 hours to the above materials if properly installed.

007029 • Gator Ultra Performance Concrete Adhesive, 10 oz

007030 • Gator Ultra Performance Concrete Adhesive, 28 oz

BASE & EDGE

GATOR BASE

Gator Base is an evolution in base technology saving you time, labor and money for pedestrian applications. Designed with a tongue and groove system Gator Base is easy to install. Evacuating water through its channels Gator Base is equivalent to 288 lbs (130 kg) of crushed stone, saving you 6 in (15 cm) of extra excavation. Gator Base is manufactured using lightweight high-density polypropylene and is environment-friendly and 100% recyclable. Extremely durable, Gator Base will not degrade in the ground.

007028 • Gator Base

GATOR EDGES TILES

Gator Base is an evolution in base technology saving you time, labor and money for pedestrian The GATOR TILE EDGE is the fully customizable solution to run around the perimeter of your finished porcelain tile installation, providing stability and strong lateral support. The Gator Edge is made with 100 % polyethylene.

005146 • Gator Edges Tiles

GATOR EDGES MINI-PRO

Gator Edge Mini is made with 100 % Polyethylene. This will give it great strength as well as provide great flexibility. Paving Edge for natural stone and all types of slabs. It is easy to use and quick to install. Gator Edge Mini model is ideal for applications for up to 1" that can be used for all applications such as walkways, paths, entrances etc.

005145 • Gator Edges Mini-Pro

GATOR EDGE FLEX 8 FT

Gator Edge Flex is easy to use and quick to install offering a great lateral support and makes definition easier for alleys, driveways or sidewalks. Made with 100% polypropylene for strength and flexibility. Gator Edge Flex can be interconnected with the "Twist & Lock" system. Gator Screws are used to fasten Gator Flex edge to the Gator Base or can be fastened with Gator Nails in a traditional foundation.

001828 • Gator Edge Flex - 8 FT

GATOR EDGE RIGID - 8 FT

Gator Edge Rigid is easy to use and quick to install offering a great lateral support and makes definition easier for alleys, driveways or sidewalks. Made with 100% polypropylene for strength and flexibility. Gator Edge Rigid can be interconnected with the "Twist & Lock" system. Gator Screws are used to fasten Gator Rigid edge to the Gator Base or can be fastened with Gator Nails in a traditional foundation.

001829 • Gator Edge Rigid - 8 FT

BASE & EDGE

GATOR NAIL SPIRAL

Alliance Gator Nails are high quality nails which are available in lengths of 10 in and 12 in, spiral models. Gator nails are designed for use with Gator Edge.

005718 • Gator Spiral Nail 10"

005719 • Gator Spiral Nail 12"

GATOR COMMON NAIL

Alliance Gator Nails are high quality nails which are available in lengths of 10 in and 12 in, common models. Gator nails are designed for use with Gator Edge.

001830 • Gator Common Nail 10"

005144 • Gator Common Nail 12"

GATOR SCREW

Fastening Gator Edge with the GATOR BASE SCREW through the Gator Base reinforces the outside perimeter, creating a strong lateral support. GATOR BASE SCREWS are a required component on any Gator Base install.

005147 • Gator Screw

Packaging: • 50 Screws/Pack, 20 packs/Box

GATOR SPACER

GATOR SPACER provides uniform spacing and unparalleled horizontal and vertical stability to the system. Available in joint sizes of 1/8", 3/16" and 1/4" (3,2 mm, 4,8 mm and 6,4 mm).

005148 • Gator Spacer 1/4"-6.4 mm

005149 • Gator Spacer 3/16"-4.8 mm

005150 • Gator Spacer 1/8"-3.2 mm

GATOR XTREME EDGE

Gator XTreme Edge is the ultimate fiber-reinforced and polymer modified structural edge, which creates a strong and economical edging solution for any hardscape project. Gator XTreme Edge can be used on any traditional, permeable, Gator Base, or overlay application using concrete pavers and slabs or natural and wet cast stones. Gator XTreme Edge offers permanent continuous lateral support.

006016 • Gator Xtreme Edge

BUZON PEDESTALS

BUZON TB SERIES PEDESTAL

The TB polypropylene pedestal is hard-wearing like all BUZON products, but this one is really the designer's best friend. The BUZON TB Series pedestal has an adjustable height of 28 to 1130 and a multi-angle head. Your creativity will get a free rein thanks to their fully independent tabs which can be fixed or pivoting. The TB polypropylene pedestal is suited to a range of joint and slab dimensions allowing them to be used with non-standard paving slabs. BUZON TB-0 is a 11mm fixed height pedestal and the BUZON TB-1 is a 14mm fixed height pedestal.

BUZON GRIP LIFTING TOOL

Paver or Tile lifting tool

BUZON KEY

BUZON key wrench to adjust pedestal height when loaded with pavers

CLEANERS & ACCESSORIES

GATOR EFFLORESCENCE CLEANER

Gator Efflorescence Cleaner will remove any efflorescence stains trapped in the concrete pavers and natural stone pores. It will make the pavers look more clean and vibrant without discoloring or damaging the paver surface. This efflorescence cleaning is a necessary step before a sealer is applied. The sealer will be able to get a deeper penetration into the now-clean pores.

002419 • Gator Efflorescence Cleaner 1 GAL

002420 • Gator Efflorescence Cleaner 5 GAL

GATOR RUBBER PAINT & TAR REMOVER

Gator Rubber, Paint and Tar Remover + is effective in removing rubber, paint and tar from the surface of concrete pavers and natural stones. Furthermore, it could be used to emulsify some sealers and could be used as a cleaning agent when using a bonding agent such as Gator Rock Bond.

002423 • Gator rubber paint & tar remover 1 quart

GATOR RUST REMOVER

Gator Rust Remover is effective in removing rust on the surface of concrete pavers and natural stones..

002425 • Gator Rust Remover 1 QUART

CLEANERS & ACCESSORIES

GATOR SHAMPOO

Gator Shampoo removes ground-in dirt from the surface of concrete pavers and natural stones. It will make the pavers, patio slabs, walls & natural stones look clean and vibrant.

002421 • Gator Shampoo 1 GAL

002422 • Gator Shampoo 5 GAL

GATOR OIL AND GREASE CLEANER

Gator Clean XP Oil and Grease Remover easily removes tough stains such as motor oil, cooking oil & grease. Just shake the bottle, spread it on the stain, let it dry, and sweep it up. Use it on concrete, brick and stone. Not recommended for synthetic oil stains. Gator Clean XP Oil and Grease Remover is biodegradable and phosphate-free. Shake it, Spread it (let it dry), Sweep it!

002424 • Gator Oil and Grease Cleaner

GATOR ECO STRIPPER

Gator Sealer Stripper is extremely effective for removing sealer from concrete paver or stone. It is a paste, it is easily applied with a brush, or roller. Gator Sealer Stripper is formulated to remain wet and effective over extended periods. Always preform a test area to determine exact reacting time. To use, apply to surfaces with a brush, roller according to test patch results. Once is ready to be removed use power washer to strip surface. Be sure to scrub remaining residue with nylon brush and water. Allow surfaces to air dry before resealing.!

007031 • Gator Eco Stripper (4 x 1 GAL)

007032 • Gator Eco Stripper (5 GAL)

GATOR PROFESSIONAL GRADE EFFLORESCENCE

Professional Grade Gator Efflorescence & Slurry Remover will remove any efflorescence stains trapped in the concrete pavers, wet cast & natural stone pores. It will make the pavers look more clean and vibrant without discoloring or damaging the paver surface. This efflorescence cleaning is a necessary step before a sealer is applied. Ideal Mixture: 8 parts water 1 part product. Further dilution is possible. You must test all dilutions on small inconspicuous area of 4 sq. ft. to insure no etching of the surfaces. Please read all instructions before applying this product.

008356 • Gator Professional Grade Efflorescence 5 GAL

GATOR SPRAYER

Use a Gator Sprayer it is easy to use and will provides an accurate water-to-cleaner mix ratio. Connects directly to your garden hose when using the Gator Shampoo or Gator Efflorescence Cleaner, just adjust the knob for the select product and apply the diluted product on the wet paver surface and proceed with the brushing and the rinsing of the paved surface.

008991 • Gator Sprayer

GATOR ROCK BOND

Mixed Gator Rock Bond with 100% washed and dried riverstone creates a durable permeable and decorative surface. Great for garden pathways where erosion and drainage is a concern, at the same time, it reduces maintenance and clean-up and is durable in extreme conditions.

002464 • Gator Rock Bond, (Binder only) 1 GAL

007590 • Gator Rock Bond Kit, (Rock & Binder) PAIL

CLEANERS & ACCESSORIES

GATORENE

Gatorene is ideal for removing, retouching & restoring water & solvent-based sealers. Gatorene will also remove certain adhesives, and is an excellent clean-up solvent for tools and equipment immediately after use. Not intended for sale or use in California. It is also great for clean up and flushing of sealers, metal sprayers.

001883 • Gator Gatorene 1 GAL

GEOGRID

MIRAGRID® 2XT

Miragrid® 2XT biaxial geogrid is composed of high molecular weight, high tenacity polyester multifilament yarns that are woven in tension and finished with a PVC coating. Miragrid® 2XT is inert to biological degradation and resistant to naturally encountered chemicals, alkalis, and acids. Miragrid® 2XT has been tested with the Techo-Bloc wall systems as per NCMA and ASTM guidelines and provides exceptional connection strengths. Wall builders prefer Miragrid® 2XT because it lays flat when deployed, is lightweight, and simple to cut to design length or work around obstructions.

001820 • Miragrid Geogrid GMG 2XT, 6' X 150'

006502 • Miragrid Geogrid GMG 2XT, 4' X 50'

GEOTEXTILE

GATOR FABRIC GF20

Gator Fabric GF20 Polyspun has a hydrophilic treatment that allows more air and water to pass through and reach the plant. Gator Fabric GF20 is a geotextile that protects against the growth of weeds. It is specially formulated to resist deterioration due to exposure to ultraviolet light and is inert to commonly encountered soil chemicals. Gator Fabric GF20 will not rot or mildew, and is non-biodegradable.

- 005986 • Gator Fabric 20 Polyspun, 3' X 50' - 16 Rolls/Box
- 005987 • Gator Fabric 20 Polyspun, 3' X 100' - 9 Rolls/Box

GATOR FABRIC GF3.5

Gator Fabric GF3.5 Non-Woven geotextile is ideal for drainage, filtration and will allow water flow of 165 gallons per minutes per square foot in a paver or retaining wall applications. Its filament fibers are used for soil separation and drainage. They combine high durability along with excellent physical and hydraulic properties. It is non-biodegradable

- 005981 • Gator Fabric 4.4, Non-Woven, 12' X 400'

GATOR FABRIC GF5

Gator Fabric GF5 is a woven geotextile made from polypropylene strips, forming a stable and durable network such that the strips retain their relative position. It provides separation for good subgrades by preventing mixing of subgrade soils. A woven geotextile can achieve higher tensile strength at low elongation. It is non-biodegradable and resist bio-chemical compound.

JOINT STABILIZERS

FLEXLOCK DUST

Flexlock Dust is a unique mixture of polymer binders and calibrated stone available in Sahara Beige or Stone Grey. Once Flexlock Dust sets, it becomes very firm and locks between the stone joints while still retaining flexibility and providing a long lasting, durable jointing material. Flexlock Dust is recommended for a variety of uses including pool decks, patios, footpaths, and any other pedestrian applications.

001831 • Flexlock Dust 50 lb, Sahara Beige

001832 • Flexlock Dust 50 lb, Stone Grey

FLEXLOCK SAND G2-RAPID SET 50 LB

Flexlock Sand G2 is made with a state-of-the-art manufacturing process. Specifically, calibrated sand is mixed with sophisticated intelligent polymers. This new generation of Intelligent Polymers neutralizes haze and dust. No blower is needed and the intelligent polymeric sand requires only one watering; 30 sq.ft. for 30 seconds and offering a Rapid Set technology of rain safe after 15 minutes. Flexlock Sand G2 is recommended for a variety of uses including sloping areas, pool surroundings, patios, walkways, driveways and much more. Available in Sandy Beige and Graphite Grey.

005733 • Flexlock Sand G2-Rapid Set 50 lb, Beige

005734 • Flexlock Sand G2-Rapid Set 50 lb, Grey

FLEXLOCK SAND 50 LB

Flexlock Sand is a unique mixture of polymer binders and calibrated sand available in Sandy Beige or Graphite grey. The installation of Flexlock Sand is almost identical to using regular paver joint sand except for the application of water. Once Flexlock Sand sets, it becomes very firm and locks between the paver joints while still retaining flexibility and providing a long lasting, durable jointing material. Flexlock Sand is recommended for a variety of uses including pool decks, patios, footpaths, driveways, parking spaces, pavements etc.

001210 • Flexlock Sand 50 lb, Beige

001211 • Flexlock Sand 50 lb, Grey

FLEXLOCK ULTRA SAND

Polymeric sand for paver joints up to 2 inch with drainage and non-drainage applications, in residential and commercial use. Perfect for concrete paver, wetcast products, in sloping areas, pool surroundings, patios, walkways, driveways and more. In drainage applications, it is rain safe 1 hour (overlays 24 hrs) after water activation above 32oF (0oC). Offering a 15 Year Limited Warranty and OSHA crystalline silica compliant / ASTM C-144 gradation with an advanced Haze Free Technology

001212 • Flexlock Ultra Sand 50 lb, Beige

001213 • Flexlock Ultra Sand 50 lb, Grey

FLEXLOCK ULTRA SAND G2-RAPID SET

Flexlock Ultra G2 is made with a state-of-the-art manufacturing process. Specifically, calibrated sand is mixed with sophisticated intelligent polymers. This new generation of Intelligent Polymers neutralizes haze and dust. The polymeric sand application is now dust free and haze free. No blower is needed and the intelligent polymeric sand requires only one watering; 30 sq.ft. for 30 seconds and offering a Rapid Set technology of rain safe after 15 minutes. Flexlock Ultra G2 is recommended for a variety of uses including pool decks, patios, footpaths, driveways, parking spaces, pavements, etc. Available in Sandy Beige, Graphite Grey, Ivory and Onyx Black.

005735 • Flexlock Ultra Sand G2-Rapid Set 50 lb, Beige

005736 • Flexlock Ultra Sand G2-Rapid Set 50 lb, Grey

005738 • Flexlock Ultra Sand G2-Rapid Set 50 lb, Onyx Black

GATOR AQUA ROCK - PERMEABLE STONE

Permeable paver joints and bedding material, graded ASTM No. 9, calibrated for the majority of permeable pavers for residential and commercial use. It helps collect roof and surface water run-off and reduce the rate of storm water off driveways, parking lots, patios and more.

000194 • Gator Aqua Rock 2,200 lbs, Granite Grey

001833 • Gator Aqua Rock 50 lb, Granite Grey

JOINT STABILIZERS

GATOR NITRO JOINT SAND

Gator Nitro Joint Sand is a ready-to-use mixture of calibrated sand and resins which cure when exposed to air, hardening from top to bottom of the joint *. The product can be installed in wet or dry weather, in joints ranging from a minimum 3/16" (5 mm) to a maximum 2" (50 mm) joint width. The minimum joint depth is 1" (25 mm).

*Gator Nitro Joint Sand will harden from top to bottom up to 2 3/8" (60 mm).

006013 • Gator Nitro, Joint Sand, Beige

006014 • Gator Nitro, Joint Sand, Grey

006015 • Gator Nitro, Joint Sand, Black

GATOR POLYMERIC TILE SAND 35 LB

Gator Tile Sand is a unique mixture of polymer binders and calibrated sand, available, that meets ASTM C144 gradation in Beige, Slate Grey, Ivory and Black Diamond. Once Gator Tile Sand sets, it becomes very firm and locks between the tile joints while still retaining flexibility and providing a long lasting, durable jointing material. Gator Tile Sand is recommended for a variety of pedestrian uses including pool decks, patios, footpaths etc. This product is for use exclusively with the Gator Tile System and Gator Base. It is not for use with porcelain tile laid directly on concrete, or directly on an aggregate or sand base or bed.

005142 • Gator Polymeric Tile, Sand, 35 lb, Ivory

EUROSTONE BOND

Eurostone Bond is the first polymeric sand, that meets ASTM C144 gradation, specifically designed for natural stone pavers. It can be used in an application for traditional and overlay base systems. It is perfect for stone roads, piazzas, driveways, pathways & stone apron driveways. This complete multipurpose sand is available in four colors: Beige, Slate Grey, Ivory and Black Diamond. It sets above the freezing temperature 32°F (0°C) and can be used for joints up to a maximum of 1.5" (3.8 cm).

002443 • Eurostone Bond 50 lb, Slate Grey

SEALERS & ACCESSORIES

GATOR ECO SEAL HIGH GLOSS

Gator Eco Seal is a copolymer acrylic used to seal concrete pavers. It penetrates deep into the concrete paver pores, thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt.

002457 • Gator Eco Seal High Gloss, Water Base 1 GAL

002458 • Gator Eco Seal High Gloss, Water Base 5 GAL

GATOR ECO SEAL LOW GLOSS

Gator Eco Seal is a copolymer acrylic used to seal concrete pavers. It penetrates deep into the concrete paver pores, thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt.

002459 • Gator Eco Seal Low Gloss, Water Base 1 GAL

002460 • Gator Eco Seal Low Gloss, Water Base 5 GAL

GATOR SEAL NATURAL LOOK

Ultra Series Signature Natural Look is made from fluorochemical polymers. This sealer penetrates deep into the concrete pavers, walls, masonry and natural stones, thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt.

002417 • Gator Seal Natural Look, Water Base 1 GAL

002418 • Gator Seal Natural Look, Water Base 5 GAL

SEALERS & ACCESSORIES

GATOR SEAL RESEALER

Gator Seal Resealer is made from acrylic-based polymers. GATOR SEAL RESEALER will penetrate the formula of the existing solvent based sealer and reactivate the molecules to create a rejuvenated seal to protect the concrete paver surface. Thus reducing the penetration of oil and dirt, as well as protecting them from de-icing salt.

002455 • Gator Seal Resealer, Solvent Base 1 GAL

002456 • Gator Seal Resealer, Solvent Base 5 GAL

GATOR SEAL SATIN LOOK FINISH

Gator Satin Look Sealer is made from acrylic-based polymers. Gator Satin LookSealer penetrates deep into the concrete pavers, thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt. Specifically formulated to be used on unsealed surfaces only.

002413 • Gator Seal Satin Look Finish, Solvent Base 1 GAL

002414 • Gator Seal Satin Look Finish, Solvent Base 5 GAL

GATOR SEAL WET LOOK FINISH

Gator WETLOOK Sealer is made from acrylic-based polymers. Gator WET LOOK Sealer penetrates deep into the concrete pavers, thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt. Specifically formulated to be used on unsealed surfaces only.

002415 • Gator Seal Wet Look Finish, Solvent Base 1 GAL

002416 • Gator Seal Wet Look Finish, Solvent Base 5 GAL

GATOR SEALER NATURAL STONE ZERO GLOSS+ENHANCER

Gator Sealer Natural Stone Zero Gloss+Enhancer is a color enhancer and is made of silicone-based polymers. This sealer penetrates deep into the natural stones thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt.

004134 • Gator Sealer Natural Stone Zero Gloss+Enhancer 1 GAL

004135 • Gator Sealer Natural Stone Zero Gloss+Enhancer 5 GAL

GATOR HYBRID SEAL HIGH GLOSS WITH COLOR ENHANCER

Gator Hybrid Seal High Gloss with Color Enhancer is 100% pure high-grade acrylic used to seal and enhance the concrete pavers color. It penetrates deep into the concrete paver pores, thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt.

004136 • Gator Hybrid Sealer High Gloss+Enhancer 1 GAL

004137 • Gator Hybrid Sealer High Gloss+Enhancer 5 GAL

GATOR HYBRID SEAL LOW GLOSS WITH COLOR ENHANCER

Gator Hybrid Seal Low Gloss with Color Enhancer is 100% pure high-grade acrylic used to seal and enhance the concrete pavers colors. It penetrates deep into the concrete paver pores, thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt.

004140 • Gator Hybrid Sealer Low Gloss+Enhancer 1 GAL

004149 • Gator Hybrid Sealer Low Gloss+Enhancer 5 GAL
